

LeadAC — Brand & Marketing Assets

V1

Built on docs/positioning.md. Where the positioning workbook is the **strategy**, this doc is the **execution surface** — what to say, in which exact words, where to show up, what to spend on, and how to defend the position against the Gong threat in 2026.

Last update: 2026-05-22

Owner: Founder + first marketing hire

Live partner: src/components/marketing/v2/*,
src/app/(marketing)/page.tsx, future /for/* and /vs/* routes

10. [Crisis playbook — what to do if Gong / Apollo / Clay copy us](#)

1. The Gong Reframe

Threat assessment first. Gong's May 12, 2026 PRNewswire announcement (\$500M ARR, +55% YoY, Revenue Graph as "living memory layer") was the single

biggest competitive event for our positioning. Some people inside LeadAC will panic when they read it. They shouldn't. Here is why.

1.1 The threat, named plainly

Gong launched **Revenue Graph** with explicit memory-layer language. Quote, verbatim: *“The Gong Revenue Graph turns customer interactions across emails, calls, meetings, and deals into a living memory layer.”* — Amit Bendov, CEO, PRNewswire 2026-05-12.

This collides with our positioning if read naively, because we also use “memory layer” framing. So a buyer Googling “memory layer for sales team” in June 2026 will find Gong before they find us.

1.2 Why the threat is misdirected (and why we hold our ground)

Gong’s Revenue Graph is built on a **completely different data substrate** than ours, serves a **completely different ICP**, sits behind a **price wall our ICP literally cannot afford**, and lives in a **product surface that competes with HubSpot/Salesforce, not with the SDR’s pre-call brief**.

Each one of these is asymmetric. Stack them:

Asymmetry 1 — Data substrate (the moat-decider)

MDCSV↔ Expand Full

What gets indexed	Calls, emails, meetings, deals — <i>what your team said and did</i>	Reviews, location count, vertical-stack signature, owner activity — <i>what the account is actually doing in the world</i>
Source	Internal (rep behavior + customer-facing comms)	External (operational signals about the local business)

Useful for	Coaching the rep, forecasting the deal, finding stuck deals	Finding the right local account, knowing when to call, what angle wins this vertical
Privacy/compliance surface	Heavy (call recording, GDPR/CCPA, employee monitoring)	Light (public signals + customer-permitted CRM data)

This is the line. Gong is *conversation intelligence*. We are **operational intelligence**. They know what your team said. We know what the account is doing. Same word (“memory”) describes two different primitives. We do not fight on their substrate.

Asymmetry 2 — Price wall (Gong’s own marketing closes our ICP for them)

From three independent 2026 pricing references (TechnologyInSales, [Oliv.ai](#), MaxiQ):

MDCSV↔ Expand↔ Full

25 users (small mid-market)	~\$100,000	~\$4,000/user/yr
50 users (mid-market)	85K–85K–174K	~\$2,900/user/yr
75 users	~\$266,000	~\$3,547/user/yr
<25 users	80% premium per user due to platform fee distribution	>\$4,800/user/yr

Plus: 2–3 year prepaid contract minimum, 5–15% annual renewal uplift, 7.5K–7.5K–65K mandatory onboarding, no monthly billing option.

Gong’s own product page literally says they are “*not the right fit for startups and SMBs under 25 reps, teams wanting real-time in-call coaching, or organizations without a RevOps function.*”

Our ICP (vertical SaaS, 2M–2M–50M ARR, 5–30 sellers, no RevOps engineer) hits **every disqualifier**.

MDCSV↔ Expand Full

Pilot (1 mo, ≤5 seats)	\$500/month	Not available — minimum 25 seats, 2-yr contract
Team (5 seats)	$1,500/month=1,500/month=18K/yr$	Foundation-only ≈ $7.5Kplatform+7.5Kplatform+7K licenses + 7.5Konboarding=7.5Konboarding=22K Y1l 1,$ then \$18K/yr — <i>and that’s conversation intel only, no Revenue Graph</i>
Growth (15 seats)	$3,000/month=3,000/month=36K/yr$	$\sim 45Kplatform+licenses+onboarding=45Kplatform+licenses+onboarding=80K Y1l 1$ minimum

Punchline: at the same price band as Gong’s minimum Foundation tier, we ship the entire memory layer, vertical signal libraries, CRM-native sync, and closed-loop ICP refinement — **without** the platform fee, **without** the onboarding services SOW, **without** the 2-year prepay, **without** the RevOps engineer.

Asymmetry 3 — Surface (where the memory lives)

Gong’s memory lives in **Gong** — a separate cockpit that revenue teams open. SDR alt-tabs in.

LeadAC’s memory lives **inside the HubSpot card** (M-10 in MoSCoW). SDR doesn’t leave the CRM. Pre-call brief is on the same screen as the contact record.

This UX difference is small in product but huge in pitch: **“our memory layer doesn’t need a new app, it shows up where your SDRs already are.”**

Asymmetry 4 — ICP definition (Gong serves the buyers who already lost to us)

Gong has 5,000 enterprise customers. By their own marketing, **their TAM is approximately 5,000 companies globally that have 25+ sellers, RevOps engineers, and \$100K+ tooling budgets.** They are *defending and expanding* an enterprise base.

Our TAM is approximately **50,000+ vertical SaaS companies** in the *2M–2M–50M* ARR band globally — most of whom have **zero** memory layer today because Gong is unaffordable and Apollo+Clay+Smartlead doesn’t learn.

We are not competing with Gong for a customer. We are serving the 10x-larger TAM that Gong’s economics excludes by design.

1.3 The sentence we use when buyers bring up Gong

When a buyer says *“isn’t this just Gong?”*:

“Gong is conversation intelligence — it remembers what your team said. We are operational intelligence — we remember what the account is doing. Gong starts at

100K/yr for 25 reps and 8 weeks of onboarding. We start at 100K/yr for 25 reps and 8 weeks of onboarding. We start at 1,500/month for 5 reps and 1 hour of onboarding. Apollo finds, Clay enriches, Gong records. We remember what closes.”

This sentence does four things in 60 seconds: separates substrate (operational vs conversation), names price wall, names time wall, ends with a memorable refrain. Memorize it. Every founder demo opens with a variant.

1.4 The defensive watch list

Three Gong-side events would force a positioning refresh (D-005 reversal — see [positioning.md](#) §14):

1. **Gong launches a sub-\$30K/yr tier** targeting <25 rep teams. Probability: low in next 12 months (would cannibalize their enterprise pricing). Trigger: Q3 2026 earnings or product release.
2. **Gong launches “Revenue Graph Local” / vertical-specific signal library** — unlikely without a Toast-class acquisition. Watch for ServiceTitan / Toast / Boulevard partnerships.
3. **Gong drops platform fee for teams under 50 users** — would unlock our top of TAM band. Watch G2 listings and pricing pages monthly.

Until one of these three fires: **we are safe, we are differentiated, we are ten times bigger TAM than they are**. Gong is the proof point that the category is real — we just sell the affordable, vertical, CRM-native version.

2. Brand sentence ladder

Every sentence on this ladder must be memorized by the founder, the first AE, the first marketer, the first SDR. The right rung gets used for the right context. Wrong rung = wrong impression. The ladder ascends from 3 seconds to 3 minutes.

2.1 Brand name + 1-word descriptor (AI search entity)

- **Name:** LeadAC
- **Pronunciation:** Lead-A-C (three syllables, like “Lead-A-C,” not “leadak”)
- **Always followed by:** *“the revenue intelligence layer for vertical SaaS GTM”* OR *“the operational memory for vertical SaaS sales teams”* — never standalone in first mention because the name is not yet recognized
- **Entity descriptor for Organization schema (knowsAbout field):** revenue intelligence, account intelligence, vertical SaaS sales, closed-loop ICP refinement, operational intelligence, vertical-aware account discovery, local business outbound, CRM-native enrichment, pre-call brief, SDR ramp acceleration

2.2 The 3-second pitch (handshake / billboard / Slack one-liner)

“LeadAC remembers what closes for vertical SaaS sales teams.”

7 words. Has subject (LeadAC), verb (remembers), object (what closes), qualifier (for vertical SaaS sales teams). Memorable because it pairs “remember” with a commercial outcome (“what closes”).

TR version:

“LeadAC, vertical SaaS satış ekiplerinin neyin kapandığını hatırlar.”

2.3 The 10-second pitch (Slack DM, conference badge scan, LinkedIn bio)

“LeadAC is the memory layer for vertical SaaS teams selling to local business — we find the right accounts, sync the context your CRM never had, and learn from every won and lost deal.”

35 words. Adds the three pillars (find, sync, learn). Ships on LinkedIn company description, Twitter/X bio, founder bio.

TR:

“LeadAC, local business’a satan vertical SaaS ekiplerinin operasyonel hafıza katmanı. Doğru hesapları bulur, CRM’in görmediği bağlamı senkronize eder, her kapalı ve kaybedilmiş anlaşmadan öğrenir.”

2.4 The 30-second pitch (first cold call opener / 1st email body / podcast intro)

“Vertical SaaS GTM teams — companies selling Toast, ServiceTitan, Curve Dental-class software to local business — burn 5+ hours per SDR per week on manual account research because Apollo doesn’t index location count, vertical-stack signatures, or owner activity. LeadAC is the operational intelligence layer that fills that gap. We find your next 200 local accounts, sync 12 fields per account into HubSpot, and every won and lost deal automatically sharpens the next list. Apollo finds, Clay enriches, Gong records — we remember what closes. Connect HubSpot, define your ICP, get live in under an hour.”

90 words. Has the *pain* (5 hours/SDR/week from Salesforce 2026 State of Sales), the *outcome* (200 enriched accounts), the *differentiator* (closed-loop learning), the *positioning* (vs Apollo/Clay/Gong), and the *onboarding promise* (under 1 hour).

2.5 The 90-second pitch (demo opener / pitch deck slide 2 / podcast 1st answer)

Three industries don't have a problem.

Enterprise B2B SaaS has Gong – at \$30K to \$300K a year, they have conversation intelligence, Revenue Graph, the works.

Pure SMB outbound agencies have Apollo and Clay – cheap, fast, fine for B2B-to-B2B.

But there's a third group – vertical SaaS GTM teams selling to local business. Toast, ServiceTitan, Curve Dental, Boulevard, Jobber-class companies, \$2M to \$50M ARR, 5 to 30 sellers. They have:

- No Gong – can't afford the \$100K floor, can't justify 8 weeks of onboarding, no RevOps engineer to operate it.
- No good Apollo result – Apollo's firmographic data was built for desk workers; it doesn't know what OpenTable Lite, ServiceTitan, or Dentrax mean as signals.
- No memory – when their best SDR quits, the playbook leaves.

That's the gap LeadAC fills. We're the operational intelligence layer for vertical SaaS GTM. We find the right local accounts, sync vertical context into HubSpot, and learn from every won and lost deal.

Apollo finds. Clay enriches. Gong records. LeadAC remembers what closes.

5 minutes to onboard. Less than \$2K per month for a 5-person team. First 200 enriched accounts in your HubSpot in under an hour.

Copy

2.6 The 3-minute pitch (sales deck full version)

Maps to existing [positioning.md](#) §1.4 “External manifesto” — that 250-word block is the 3-minute pitch as prose. Read it aloud, it times to 2:45–3:00.

2.7 Tagline + sub-tagline variants (homepage hero per surface)

Homepage hero (primary surface)

Headline: Revenue intelligence for the teams selling to local business.

Subhead: Your CRM knows the deal. We know the business behind it.

CTA: Book a 20-min demo · See it on a sample account

Homepage hero (alt — Gong-defensive variant for A/B test)

Headline: Conversation intelligence knows what was said. We know what’s happening.

Subhead: The operational memory layer for vertical SaaS GTM teams selling to local business.

CTA: Book a 20-min demo

Homepage hero (alt — stack-vs-platform variant)

Headline: Apollo finds. Clay enriches. Gong records. LeadAC remembers what closes.

Subhead: The intelligence layer your vertical SaaS stack never had. 200 local accounts in HubSpot in under an hour.

CTA: See the workflow · Book a demo

/vs/apollo-clay-gong hero

Headline: Same money. One platform. Plus the memory your stack never had.

Subhead: Apollo gives lists. Clay gives workflows. Gong records calls. LeadAC remembers what closes for vertical SaaS teams selling to local business.

CTA: See the cost math · See the demo

/for/field-service-saas (HVAC beachhead vertical)

Headline: Field service software outbound, with the memory layer your SDRs are already building in their heads.

Subhead: See which HVAC companies use ServiceTitan, Jobber, or Housecall Pro — plus location count, review pattern, owner activity. Synced to HubSpot. 1-hour setup.

CTA: See a sample HVAC account brief

/for/restaurant-tech-saas

Headline: Sell restaurant tech faster. We see the footer, the menu, the booking flow, and the reviews — your CRM only sees the address.

Subhead: Operational intelligence for F&B SaaS GTM. Built with FineDine and the next generation of restaurant tech vendors.

CTA: See a sample restaurant brief

2.8 The one-paragraph “About LeadAC” (press release boilerplate, podcast bio, LinkedIn company page)

LeadAC is the operational intelligence layer for vertical SaaS GTM teams selling to local business. Where horizontal tools like Apollo and Clay give you lists and workflows, and where enterprise platforms like Gong give you conversation intelligence at a \$100K floor, LeadAC gives mid-market vertical SaaS sales teams — restaurant tech, field service software, dental practice management, beauty and wellness platforms — the memory layer their CRM never had. We find the right local accounts, sync vertical context into HubSpot, and every won and lost deal automatically sharpens the next list. Built for the 50,000+ vertical SaaS companies that the enterprise revenue intelligence category leaves out.

96 words. Use verbatim in press releases, podcast bios, LinkedIn company description, and Organization.description JSON-LD.

2.9 The 12 short brand assets (verbatim, ready to ship)

MDCSV $\leftrightarrow$ ExpandCC Full

LinkedIn
company tagline The operational memory for vertical SaaS sales

LinkedIn company description	(paste 2.8 verbatim, 96 words)
Twitter / X bio	Operational intelligence for vertical SaaS GTM. We remember what closes.
Founder LinkedIn headline	Founder @ LeadAC · operational memory for vertical SaaS sales teams selling to local business
Email signature (founder)	LeadAC — we remember what closes. — Book a demo: leadac.ai/demo
Out-of-office line	Building the operational memory layer for vertical SaaS sales. Back soon.
Slack bot tagline	LeadAC · the memory layer your stack never had
HubSpot card subtitle	LeadAC operational brief · vertical SaaS context for this account
Pricing page subtitle	Connect HubSpot. 200 local accounts in under an hour. Cancel anytime.
Free-trial-not-available copy	We're sales-led. Pilot starts at \$500/month for 30 days. No free tier — we attract operators, not browsers.
404 page	This page got lost. The 200 local accounts in your HubSpot didn't. → home
Conference badge / sticker	apollo finds. clay enriches. gong records. we remember. — leadac.ai

3. Voice and tone rules

Voice is **what we sound like**. Tone is **how we adapt**. The rules below are non-negotiable for owned media; community engagement gets one degree of looseness, sales-call talk tracks get two.

3.1 Voice principles (the 5 do's)

1. **Specific over abstract.** “Apollo’s 12-14% bounce rate” beats “data quality issues.” “OpenTable Lite footer signal” beats “intent signals.” Buyer trusts numbers and verbs, not adjectives.
2. **Verbs of memory.** *remembers, learns, sharpens, compounds, surfaces, traces, retraces.* Never *automates, optimizes, scales, transforms, revolutionizes.*
3. **Quietly confident.** State, don’t shout. “*LeadAC is the operational memory.*” Not “*LeadAC is the world’s most advanced AI-powered revolutionary operational memory platform.*”
4. **Operator empathy.** Speak like an SDR Manager talking to another SDR Manager. “*You know that 5 hours per rep per week your team is losing to research.*” Not “*Industry-leading research efficiency.*”
5. **Anti-Gong elegance.** When mentioning Gong, never sneer. State the price, state the time, state the surface, move on. Buyers respect competition; they don’t trust trash talk.

3.2 Voice anti-principles (the 5 don'ts)

1. **Don't say “AI” as a noun.** It’s a feature, not a product. We say “*semantic memory,*” “*vertical signal libraries,*” “*closed-loop refinement.*” We never say “*powered by AI*” on a hero.
2. **Don't say “agentic.”** Saturation 0.93 ([positioning.md](#) §5). Every competitor uses it. Saying it makes us indistinguishable.
3. **Don't say “platform” without a qualifier.** We are an “*intelligence layer,*” “*memory layer,*” “*context layer.*” Layers add to a stack. Platforms try to replace it. Our customer’s stack is HubSpot+Apollo+Smartlead+Slack — we don’t replace it, we sit between it.
4. **Don't promise “10x.”** Don’t say “transform,” “revolutionize,” “disrupt.” We say “*the playbook your best SDR built in their head, finally inside the system.*” Concrete > vague hyperbole.

5. **Don't write copy that Apollo could also write tomorrow.** If a sentence is true for any AI-anything-platform, drop it. Test: replace "LeadAC" with "Apollo" in the sentence. If it still reads correctly, the sentence is wrong.

3.3 The 12-word test

Every hero, every section header, every ad headline, every cold email subject line must answer **all four** of these in ≤12 words across the cluster:

- 1. **Who is this for?** (vertical SaaS sales team)
- 2. **What does it do?** (memory of what closes / operational intelligence)
- 3. **What does it not do?** (it's not an AI SDR; it's not Gong)
- 4. **Why us, why now?** (Gong-tier intelligence at mid-market price + 1-hour onboarding)

If the headline doesn't carry 1+2, the subhead must. If the subhead doesn't carry 3+4, the CTA must.

3.4 Word list — use aggressively / use carefully / never use

MDCSV↔ Expand Full

operational intelligence	memory layer (always with vertical qualifier)	AI SDR
operational memory	revenue intelligence (always with "for local business sales")	agentic AI
closed-loop	platform (only with "layer alternative")	autonomous
vertical-aware	smart (only as adjective for code primitives)	revolutionary
signal library	scale (only with concrete number)	10x

pre-call brief	AI (only as feature, never as product)	transformative
vertical SaaS GTM	personalization (only when contrasted with “context”)	next-generation
local business	enrichment (only when contrasted with “learning”)	best-in-class
account intelligence	outbound (always with “vertical” or “local”)	unified end-to-end
HubSpot-native	predictive (only with concrete model output)	seamless
vertical pack	engagement (only when contrasted with “intelligence”)	empower
Apollo finds, Clay enriches, Gong records, we remember	memory (always paired with substrate qualifier)	leverage (as a verb)
200 accounts in 1 hour	revenue (only with concrete metric)	synergy

3.5 Editing pass — the four-question test

Before any piece of marketing copy ships:

1. **Could Apollo say this tomorrow?** If yes → drop.
2. **Does this require local-business operational signals to be true?** If no → drop.
3. **Does this require closed-loop CRM outcome data to be true?** If no → drop.
4. **Would a 30-something VP Sales at FineDine, Workiz, or Curve Dental actually say “yes, that’s me”?** If no → drop.

Three of four required to ship.

4. Keyword asset inventory

The operational asset. Every keyword has a **tier** (paid / organic / owned / branded / attack / avoid), a **page target** (where the lander lives), a **persona** (who searches it), and an **intent class** (10-class taxonomy from [positioning.md](#) §7).

4.1 Tier 1 — Branded keywords (we must dominate these on Day 1)

These must rank #1 organically + appear in every AI search citation. SEO + Brand are merged.

MDCSV↔ Expand Full

leadac	/	Day 1
leadac.ai	/	Day 1
leadac pricing	/pricing	Day 1
leadac demo	/demo	Day 1
leadac vs apollo	/vs/apollo	Day 1
leadac vs clay	/vs/clay	Day 1
leadac vs gong	/vs/gong	Day 1
leadac review	/reviews (G2/Capterra inbound link)	Day 30 (after first G2 listing)
leadac alternative	/manifesto (defensive)	Day 60
is leadac legit	/about	Day 30
leadac founder	/about	Day 30

leadac integration hubspot	/integrations/hubspot	Day 1
leadac integration smartlead	/integrations/smartlead	Day 30

4.2 Tier 2 — Owned whitespace keywords (we created or first to claim — see [positioning.md §6](#))

These match our whitespace map. Volume is low today; we are creating the search demand alongside the content.

MDCSV↔ Expand Full

ai sdr alternative (defensive — to capture buyers explicitly looking for AI SDR who could be redirected)	/manifesto (educational redirect)	Solution Seeking	No	Yes

4.4 Tier 4 — Long-tail vertical keywords (programmatic SEO — built per vertical pack)

Volume is low per query but high in aggregate, and intent is extremely high. These are the SEO pages we build at scale (per [positioning.md](#) §10 vertical packs).

MDCSV↔ Expand Full

Field service / HVAC	/for/field-service-saas, /resources/[vertical- vendor]-competitor- outbound	hvac software outbound, servicetitan competitor sales, jobber competitor outbound, housecall pro competitor, field service saas sdr tools, multi- location hvac targeting,
---------------------------------	--	--

		field service vertical signal library
Restaurant tech	/for/restaurant-tech- saas, /resources/restaurant- tech-[vendor]-vs- [vendor]	restaurant tech sdr playbook,opentable lite signal,toast competitor outbound,square for restaurants competitor, multi-location restaurant outbound, restaurant tech account intelligence,restaurant pos software outbound playbook
Dental practice management	/for/dental-practice- software, /resources/dental- practice-[vendor]-vs- [vendor]	dental practice management outbound, dentrrix vs eaglesoft migration signal,multi- location dental dso list, dental saas sdr playbook
Beauty / wellness	/for/beauty-wellness- saas, /resources/boulevard-vs- mindbody-migration- signal	boulevard competitor outbound,mindbody competitor sales tools, beauty wellness saas sdr playbook
Hospitality / boutique hotel	/for/hospitality-saas	mews competitor sales, cloudbeds competitor outbound,boutique hotel software sales tools
Legal practice management	/for/legal-practice- software	clio competitor sales tools,legal saas sdr playbook

Programmatic rule: every vertical pack ships with **5 cluster pages** that follow the same structure — /for/<vertical>, /alternatives/<incumbent> (per vertical

leader), /resources/<vertical>-sdr-playbook, /resources/<vertical>-signal-library, /resources/<vertical>-gtm-benchmark. Programmatic SEO at the vertical-pack layer, not at the city/keyword-spam layer.

4.5 Tier 5 — AVOID keywords (saturated — see [positioning.md](#) §5)

We do **not** bid on these. We do **not** write hero copy with these. We do **not** SEO-target them.

MDCSV↔ Expand Full

ai sdr	Saturated 0.95; collides with 11x/Artisan/AiSDR/Regie	0.95
ai bdr	Same	0.92
agentic ai	Saturated 0.93; every competitor	0.93
revenue intelligence (unqualified)	Gong owns; collides	0.65 at enterprise
revenue ai	Gong owns	0.70
revenue orchestration	Clari + Salesloft own (Gartner category)	0.85
sales engagement platform	Outreach + Salesloft + Lemlist	0.90
gtm platform (unqualified)	Apollo + ZoomInfo + Clay + Salesloft	0.92
lead generation on autopilot	Saturated 0.95; AI SDR territory	0.95

multichannel sequences	Lemlist + Reply + Outreach	0.85
personalization at scale	All competitors	0.88
pipeline coverage	Clari + Salesloft + Outreach	0.90
intent data (as headline noun)	6sense + Bombora + Demandbase	0.92
end-to-end gtm	Apollo + ZoomInfo + Outreach	0.88
all-in-one platform	Apollo + ZoomInfo + Salesloft	0.88

4.6 The keyword scoring formula (use when evaluating any new keyword)

Keyword Score = (Search Volume × Intent Class Weight × Saturation Inverse × Vertical Match)

Where:

Intent Class Weight = 1.0 (Buying), 0.8 (Switching), 0.7 (Solution Seeking), 0.4 (Awareness), 0.3 (Comparison without intent)
Saturation Inverse = (1 - saturation_score)
Vertical Match = 1.0 (vertical-specific), 0.7 (vertical-adjacent), 0.4 (horizontal)

Decision rule:

Score > 0.6 → Tier 1-3 (own and bid)

Score 0.3-0.6 → Tier 4 (programmatic only, no manual bid)

Score < 0.3 → Tier 5 (avoid)

Copy

A keyword like apollo alternative for restaurant tech saas is roughly:

- Volume: low (~50/mo) but high commercial intent — count as 1.0
- Intent: Switching → 0.8
- Saturation: 0.10 → inverse 0.9
- Vertical Match: 1.0
- **Score** = $1.0 \times 0.8 \times 0.9 \times 1.0 = 0.72$ → Tier 2/3, build the page.

A keyword like ai sdr is:

- Volume: high (~5K/mo)
- Intent: Solution Seeking → 0.7
- Saturation: 0.95 → inverse 0.05
- Vertical Match: 0.4
- **Score = 1.0 × 0.7 × 0.05 × 0.4 = 0.014** → Tier 5, avoid.

5. Channel placement matrix

Where to show up, by persona × stage × intent. Every cell answers “what does the persona see, and what action do we want them to take?”

5.1 The persona × stage matrix

5.2 The channel priority list (rank order — invest top to bottom)

MDCSV↔ Expand Full

1	Founder-led LinkedIn (organic) — 3 posts/week, M/W/F, the 3-2-1 formula (3 posts/week, 2 substantive comments/day, 1 weekly DM to an engager)	High (1 hr/day from founder)	30-60 days to first inbound	Founder	0(SalesNavigator0(SalesNavigator99/mo optional)
2	SEO for owned + attack keywords (organic) — Tier 2 whitespace + Tier 3	High (15-20 cluster pages in 90 days)	90-180 days to first organic	Founder + part-time writer	0(orcontentagency0(orcontentagency3K-\$8K/mo at Day 60+)

comparis
on pages

3	Vertical community presence — Pavilion + RevGenius + RevOps Co-op + r/sales	Medium (value-first posts; never spam)	30-90 days for credibility	Founder + first AE	<i>0+Pavilionmembership(0+Pavilionmembership(1.5K-\$2.5K/yr per seat)</i>
4	AEO / GEO optimization — get cited by ChatGPT, Perplexity, Gemini, AI Overviews	Medium (schema + content)	30-90 days for first AI citation	Founder + dev (schema work)	\$0 (technical work)
5	G2 + TrustRadius + Capterra reviews — listed Day 30;	Low (request from pilot customers)	60-90 days for review pages to rank	Founder	G2 Basic free; G2 Marketing \$5K+/mo deferred

	10 reviews by Day 90				
6	Founder podcast appearances — SaaS CRO Confidential, Topline, RevOps Co-op, Pavilion's The Executive , Modern Sales Pros, 20VC (if accessible))	Medium (founder time; PR contact list)	30-60 days per appearance	Founder	<i>0(orPRagency0(orPRagency5K-\$15K/mo deferred to Day 90)</i>
7	Vertical- specific conferences — ServiceTitan Pantheon , Toast Big Restaurant Show, Pavilion	High (travel + booth + sponsorship)	60-120 days for follow-up close	Founder + first AE	Defer to Day 90+; budget <i>5K–5K–30K</i> per event

	CRO Summit, SaaStr Annual (selective)				
8	Paid Google Ads — comparison + attack keywords only	Low setup, ongoing optimization	14-30 days to first lead	Founder + paid agency	Start <i>1K/mo, scale to 1K/mo, scale to 5K-\$10K/mo</i> if CAC works
9	Paid LinkedIn Ads — retargeting + lookalike	Medium	30-60 days	Founder + paid agency	Defer to Day 60+; start \$2K/mo
10	Paid Reddit (r/sales sponsorships)	Low	30 days	First marketing hire	Defer to Day 90+; start \$1K/mo if community traction validated

5.3 The channel NOT-DO list (explicit no's — protects focus)

- **Twitter / X (paid or organic):** Declining B2B engagement; our buyer is on LinkedIn; founder bandwidth better spent there.
- **Facebook Groups:** Zero VP Sales presence at our ICP segment.
- **Instagram / TikTok / YouTube Shorts:** Wrong format, wrong audience.

- **Hacker News:** Distant adjacent; founder will get distracted on demand-gen rabbit holes there.
- **Generic B2B SaaS conferences without vertical fit:** SaaStr Annual is borderline OK (founder networking only); SaaStock, B2B SaaS Conferences, etc. — skip.
- **Outbound cold email to ourselves:** “Hey, we’re an outbound platform” feels self-defeating. Use partner channels (Pavilion intros, vertical SaaS founder Slack rooms) instead.
- **Influencer “shoutouts” / paid newsletter sponsorships before Day 90:** ROI unclear at zero brand recognition.
- **Display ads / banner ads:** Banner blindness; intent stage mismatch.
- **Programmatic SEO for city/keyword spam pages** (e.g., hvac software in [city]): Looks spammy, hurts AEO trust signals, distracts from vertical-pack SEO that actually works.

6. Paid vs organic spend strategy

Budget allocation rule: **10% paid, 90% organic + founder-led** for first 6 months. Why this ratio: at zero brand recognition, paid ads convert badly because the click goes to a brand the searcher doesn’t trust. Organic builds the trust. Once we have 10+ G2 reviews and 3+ podcast appearances, the ratio shifts to 30/70 in months 7-12.

6.1 Paid — what to buy (Day 30 onward, NOT Day 0)

Total Day 30-90 paid budget: **3K–3K–8K/month**. Day 0-30: **\$0 paid**. Pre-launch paid burns money on a brand nobody recognizes.

MDCSV↔ Expand Full

Google Search Ads (RSA)	70% of paid	Attack keywords (Tier 3): apollo	/vs/apollo, /vs/clay, /alternatives/gong,	High commercial intent, low CPC

		alternati ve for vertical saas, clay alternati ve no engineer, gong alternati ve for mid- market, apollo bounce rate fix	/resources/apol lo-bounce-rate- fix	because long-tail, compariso n shoppers in buying mode
LinkedIn Sponsored Content	20% of paid (Day 60+)	Title-based: VP Sales / Head of GTM / SDR Manager at vertical SaaS companies; retarget homepage + comparison page visitors	/for/<vertical>, manifesto, founder thought leadership posts	Persona- precise targeting; LinkedIn's the only platform where we can filter exactly to "VP Sales at Workiz, FieldEdge, Service Fusion, Boulevard, etc."
Reddit Ads (r/sales, r/SalesOperatio ns, r/SaaS)	10% of paid (Day 90+)	Subreddit + topic targeting	/manifesto, /resources/<top ic>	Practition er audience; LLMs cite

Reddit
heavily
(helps
AEO)

What we do NOT buy:

- **Display / banner ads** — banner blindness, wrong intent
- **Google Generic Search** (e.g., revenue intelligence, crm enrichment) — \$10+ CPC, wrong tier, attracts enterprise tire-kickers
- **Twitter / X ads** — declining B2B
- **Facebook ads** — zero B2B vertical SaaS fit
- **YouTube pre-roll** — distant from buying intent

6.2 Organic — where the founder spends time (Day 0 onward, mandatory)

Founder time, hour by hour, weekly:

MDCSV↔ Expand Full

LinkedIn — 3 posts (insight + story + engagement)	4 hrs (write + edit + publish)	Pipeline driver per Kareem Amin / Guillaume Moubeche playbook; Clay went <i>1M→1M→100M</i> ARR partly on founder LinkedIn
LinkedIn — 10-15 substantive comments/day on ICP posts	5 hrs (1 hr × 5 weekdays)	Algorithm rewards engagement; comments outpace cold posts for visibility
LinkedIn — 1 weekly DM to top engager	0.5 hr	Most efficient conversion of comment engagement to qualified conversation

Founder podcast appearances (target 1/month)	2 hrs/month (prep + recording)	Brand authority + AEO citation source
SEO content — 1 cornerstone piece/week	6 hrs (research + draft + edit)	Tier 2 owned + Tier 3 attack content
Pavilion / RevGenius / RevOps Co-op — 3 substantive posts/week	1.5 hrs	Community credibility + referral pipeline
Customer interviews (5/week minimum during launch)	5 hrs (calls + notes)	Content fuel + product feedback + future case studies
Total founder time on marketing	~22 hrs/week	This is real. Marketing in 2026 is a founder-CEO job until \$1M ARR.

6.3 The Clay LinkedIn ROI benchmark (the proof point)

Clay's CEO Kareem Amin publicly stated (LinkedIn post, 2026): **"Our growth team dropped LinkedIn CPL from 250 to 25 in two months."** They achieved this by using Clay's own enrichment to build hyper-targeted lookalike audiences (work email matching personal LinkedIn profiles via Clay's enrichment pipeline).

We have the same primitive. Once M-01 (HubSpot connector) and M-03/M-04 (vertical packs) ship, we can do the same trick: enrich our prospect list and feed it back to LinkedIn Audiences as a custom-match list, dropping our own CPL well below the LinkedIn average of 80–80–250.

This is the Day 90 paid LinkedIn strategy. Until then, organic founder-led only.

6.4 The 70/20/10 rule (Day 90+)

Once we have proof points (10 G2 reviews, 5+ paying customers, 3+ podcast appearances), allocate marketing budget as:

- **70% — keep doing what works** (founder-led LinkedIn, vertical pack SEO, comparison pages)
- **20% — scale what works** (paid amplification of best-performing organic content; LinkedIn lookalike audiences from customer data)
- **10% — experiments** (new vertical pack launch, Reddit ads, vertical conference sponsorships, podcast sponsorships)

7. AEO and GEO tactics

The single most under-leveraged 2026 marketing surface: getting cited inside ChatGPT, Perplexity, Claude, Gemini, and Google AI Overviews. AEO traffic converts 3-10× better than Google organic because the searcher arrives mid-decision, having read the answer already.

Citation share (not ranking) is the metric.

7.1 The five must-do AEO setup tasks (Week 1 of launch)

Task 1 — Unblock AI crawlers in `robots.txt`

Ensure none of these are blocked:

User-agent: GPTBot
Allow: /

User-agent: ChatGPT-User
Allow: /

User-agent: ClaudeBot
Allow: /

User-agent: PerplexityBot

Allow: /

User-agent: Google-Extended

Allow: /

User-agent: Applebot-Extended

Allow: /

User-agent: Bingbot

Allow: /

Copy

Implementation note: live robots.txt route in src/app/robots.ts (Next.js 16 convention). Today's state needs verification — check Glob for robots.ts / robots.txt.

Task 2 — Ship Organization schema with sameAs, knowsAbout, founder

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "LeadAC",
  "url": "https://leadac.ai",
  "logo": "https://leadac.ai/logo.png",
  "description": "Operational intelligence layer for vertical SaaS GTM teams selling to local business. Built for restaurant tech, field service, dental, beauty, legal, and hospitality software vendors who need account intelligence, vertical-aware account discovery, and closed-loop ICP refinement at mid-market pricing.",
  "founder": {
    "@type": "Person",
    "name": "<Founder name>",
    "url": "https://www.linkedin.com/in/<founder>",
    "sameAs": [
      "https://twitter.com/<founder>",
      "https://github.com/<founder>"
    ]
  },
  "sameAs": [
    "https://www.linkedin.com/company/leadac",
    "https://twitter.com/leadac",
    "https://www.crunchbase.com/organization/leadac",
  ]
}
```

```

    "https://www.g2.com/products/leadac",
    "https://en.wikipedia.org/wiki/LeadAC"
  ],
  "knowsAbout": [
    "revenue intelligence",
    "account intelligence",
    "operational intelligence",
    "closed-loop ICP refinement",
    "vertical-aware account discovery",
    "vertical SaaS GTM",
    "local business outbound",
    "CRM-native enrichment",
    "pre-call brief",
    "SDR ramp acceleration",
    "field service software sales",
    "restaurant tech sales intelligence",
    "dental practice management outbound",
    "memory layer for vertical SaaS"
  ],
  "offers": {
    "@type": "Offer",
    "priceRange": "$500-$5000",
    "priceCurrency": "USD"
  }
}
Copy

```

Ship this on / (homepage) and /about.

Task 3 — Ship FAQPage schema on every cornerstone page

Direct-answer paragraphs of 40-60 words per question. LLMs lift these verbatim.

Example for /manifesto (the “what is LeadAC” page):{ "@context":

```

"https://schema.org",
"@type": "FAQPage",
"mainEntity": [
  {
    "@type": "Question",
    "name": "What is LeadAC?",
    "acceptedAnswer": {
      "@type": "Answer",
      "text": "LeadAC is the operational intelligence layer for vertical SaaS
GTM teams selling to local business. We find the right local accounts, sync

```

vertical context into HubSpot, and learn from every won and lost deal. Built for restaurant tech, field service software, dental, beauty, legal, and hospitality SaaS vendors at \$2M to \$50M ARR."

```
    }
  },
  {
    "@type": "Question",
    "name": "How is LeadAC different from Apollo?",
    "acceptedAnswer": {
      "@type": "Answer",
      "text": "Apollo gives you a list of contacts based on firmographic data. LeadAC gives you operational context – location count, vertical software stack signature, review tone, owner activity – that Apollo's database does not index. Apollo finds, LeadAC times. You keep Apollo; we sit on top and write 12 enriched fields per account into HubSpot."
    }
  },
  {
    "@type": "Question",
    "name": "How is LeadAC different from Gong?",
    "acceptedAnswer": {
      "@type": "Answer",
      "text": "Gong is conversation intelligence: it remembers what your team said on calls and emails. LeadAC is operational intelligence: we remember what the account is doing in the world. Gong starts at $100K per year for 25 reps and requires 8 weeks of RevOps engineering. LeadAC starts at $1,500 per month for 5 reps and onboards in under an hour."
    }
  },
  {
    "@type": "Question",
    "name": "How is LeadAC different from Clay?",
    "acceptedAnswer": {
      "@type": "Answer",
      "text": "Clay is a programmable GTM workflow runtime – extremely flexible, but requires a GTM engineer to operate and burns credits unpredictably. LeadAC is the finished product for vertical SaaS teams: pre-built vertical signal libraries (HVAC, restaurant, dental, beauty, legal, hospitality), CRM-native sync, closed-loop ICP refinement out of the box. Connect HubSpot in one hour, no engineer required."
    }
  },
  {
    "@type": "Question",
    "name": "What does LeadAC cost?",
```

```

    "acceptedAnswer": {
      "@type": "Answer",
      "text": "Pilot tier starts at $500 per month for a 30-day evaluation with
500 accounts and one CRM. Team tier is $1,500 per month for 5 seats and 5,000
accounts per month. Growth tier is $3,000 per month for 15 seats and 20,000
accounts per month. Enterprise tier starts at $5,000 per month. All plans cancel
anytime – no annual contract."
    }
  },
  {
    "@type": "Question",
    "name": "Which CRMs does LeadAC integrate with?",
    "acceptedAnswer": {
      "@type": "Answer",
      "text": "LeadAC ships with native HubSpot integration via OAuth on day
one. Pipedrive and Close integrations follow within 60 days. Salesforce
integration is on the roadmap for enterprise customers. The integration writes 12
enriched fields per account directly into the CRM contact and company records,
with closed-loop outcome ingestion from CRM webhooks."
    }
  }
]
}
Copy

```

Ship this on every cornerstone page with the relevant Q&A set for that page. AI Overviews extract these verbatim.

Task 4 — Get listed on G2 / Capterra / TrustRadius (within Day 30)

Why: ChatGPT, Perplexity, and Gemini cite G2 listicles heavily for “best [category] tool” queries. First Page Sage research (cited by Simon Ward 2026 AEO guide): “appearing in highly-ranked list articles makes the single biggest difference in earning an AI chatbot’s recommendation.”

Action items:

- Day 7: Submit LeadAC for listing in G2 categories: “Revenue Operations and Intelligence”, “Sales Intelligence”, “Lead Intelligence”, “Account-Based Analytics”, “Sales Enablement”
- Day 14: Same on Capterra + TrustRadius + SoftwareAdvice + GetApp

- Day 21: First 3 customer reviews submitted (founder asks pilot customers personally; offers \$50 Amazon card per verified review)
- Day 60: 10 verified reviews target

Task 5 — Seed Reddit content (LLMs love Reddit for “human advice” citation)

Why: Gemini, ChatGPT, and Perplexity weight Reddit content highly. Lemlist’s CMO publicly described their 2026 AEO playbook: *“a Reddit agency posting threads on specific subreddits because LLMs love Reddit.”*

Action items:

- Identify 8-10 evergreen subreddits: r/sales, r/SalesOperations, r/SaaS, r/coldemail, r/agency, r/HVAC (for vertical context, not selling), r/dentistry, r/restaurateur, r/marketing
- Founder establishes account 90 days before any commercial mention (no instant-post-and-sell)
- Post genuine practitioner content (e.g., “We benchmarked Apollo bounce rates across 12 verticals — here’s the data”) with light or no brand mention
- Comment substantively on existing threads; never lead with a product pitch
- After 90 days of authentic posting, mention LeadAC in context (e.g., responding to “anyone know a Gong alternative for mid-market” with a value-first answer that ends in product mention)

7.2 The cornerstone content map (build over Day 0-90)

Per the LoudFace 2026 AEO research, cornerstone pages get extracted by LLMs ~10× more than non-cornerstone. Build these in order:

MDCSV↔ Expand Full

1	/manifesto	Article+ Organiza	2,500	operati onal intelli gence	Original argument: “Conversation

		tion + FAQPage		for outbound	intelligence vs operational intelligence — the line that defines 2026 outbound”
2	/vs/apollo-clay-gong	Article + FAQPage + BreadcrumbList	3,000	apollo clay gong stack alternative	Stack cost math table (cited #s with sources)
3	/vs/gong	Article + FAQPage	2,500	gong alternative for mid-market	Gong pricing breakdown table (TechnologyIns ales/Oliv/Maxi q cited)
4	/vs/clay	Article + FAQPage	2,000	clay alternative no engineer	“When Clay is overkill” decision matrix
5	/vs/apollo	Article + FAQPage	2,000	apollo alternative for vertical saas	Apollo bounce rate cost math

10	/resource s/apollo- bounce- rate-fix	Article + FAQPage	1,500	apollo bounce rate fix	Concrete fix matrix (verification add-ons vs platform switch)

7.3 The AI search tracking dashboard (build by Day 30)

Weekly prompt benchmark — run these on ChatGPT, Perplexity, Claude, Gemini, Copilot. Log which competitors appear, which (if any) cite LeadAC.

Track in a simple spreadsheet: Date / Query / Engine / Sources Cited (1-10) / LeadAC mentioned (Y/N) / Notes.

Benchmark queries (run weekly):

1. “Best alternative to Apollo for vertical SaaS sales teams”
2. “What is the best account intelligence platform for restaurant tech vendors?”
3. “Gong alternative for mid-market sales teams”
4. “Clay alternative that doesn’t require a GTM engineer”
5. “How do vertical SaaS companies sell to local businesses?”
6. “Best outbound tool for HVAC software vendors”
7. “What is operational intelligence in sales?”
8. “Apollo + Clay alternative for vertical SaaS”
9. “Memory layer for vertical SaaS GTM teams”
10. “How to reduce SDR research time at a vertical SaaS company”

Day 0 baseline: LeadAC mentioned in 0/10 (probably). Day 90 target: 3/10. Day 180 target: 6/10.

8. 30/60/90 day marketing plan

Concrete actions, by week. Built to be executed by founder + 1 part-time content writer + 0 paid agency in the first 60 days. Paid agency engagement starts Day 60.

8.1 Day 0–30 — Launch foundation

Goals:

- Brand identity complete + consistent across surfaces
- 5 cornerstone pages live (/manifesto, /vs/apollo-clay-gong, /vs/gong, /vs/clay, /for/field-service-saas)
- AEO foundation shipped (robots.txt, Organization schema, FAQPage schema on cornerstone pages)
- Founder LinkedIn cadence active (M/W/F posts, daily comments)
- G2 + Capterra + TrustRadius listing submitted
- 5 customer dev calls completed in HVAC vertical (beachhead validation)

Week-by-week breakdown:

Week 1	(a) Refresh homepage hero + subhero + CTA (2.7). (b) Ship robots.txt + Organization schema (7.1). © Set up LinkedIn cadence — write the first 3 posts.	Homepage live; AEO bot access; LinkedIn week 1 posts
Week 2	(a) /manifesto page live. (b) /vs/apollo-clay-gong page refresh (Stack-bundle thesis). © Submit G2 + Capterra listings. (d) Founder books 2 podcast intros (SaaStr CRO Confidential, Topline).	Manifesto live; first comparison live; review listings submitted
Week 3	(a) /vs/gong page live (Gong-defensive). (b) /vs/clay page live. © FAQPage schema on all live pages. (d) Founder runs 5 HVAC SaaS customer dev calls.	4 cornerstone pages live; vertical validation data
Week 4	(a) /for/field-service-saas page live (beachhead vertical). (b) Founder reaches 100 LinkedIn impressions/post avg. © First 3 G2 reviews requested + landed (from pilot/design-partner customers). (d) AI search tracking dashboard initialized (7.3).	Beachhead vertical page live; first social proof; weekly AI tracking running

Day 30 success metrics:

- 5 cornerstone pages live with FAQPage schema
- Founder LinkedIn: 50-300 followers added, 3 inbound DMs from ICP
- G2: 3 reviews submitted
- AI search dashboard: tracking 10 weekly queries; baseline established
- 5 HVAC SaaS founder/VP Sales calls completed

8.2 Day 31–60 — Activation + Distribution

Goals:

- 3 podcast appearances completed
- 5 additional G2 / Capterra / TrustRadius reviews
- /for/restaurant-tech-saas live (FineDine validation surface)
- First 100 LinkedIn followers in target ICP segment (VP Sales / SDR Manager at vertical SaaS)
- Paid Google Ads soft-launched (Tier 3 comparison keywords only, \$1K budget)
- First 5 inbound demos booked from organic

Week-by-week:

MDCSV↔ Expand Full

Week 5	(a) /for/restaurant-tech-saas page live. (b) Founder appears on Podcast #1 (likely Topline or smaller industry pod). © Pavilion membership active; first 3 substantive Slack posts.	Restaurant vertical page; first podcast; community foothold
Week 6	(a) /resources/apollo-bounce-rate-fix cornerstone live (high-intent commercial). (b) Founder appears on Podcast #2. © First paid Google Ads campaign (\$1K test budget) — apollo alternative for vertical saas, clay alternative no engineer.	First commercial-intent resource live; paid acquisition data starts
Week 7	(a) /resources/closed-loop-icp-refinement live. (b) RevGenius + RevOps Co-op active engagement. © First sample HVAC + restaurant brief published as gated resource.	Whitespace content; community engagement; demand-capture gated content

Week 8	(a) /resources/2026-vertical-saas-gtm-benchmark cornerstone live (data report — the linkable asset). (b) Founder appears on Podcast #3. © AI search dashboard: target 1/10 LeadAC mentions on tracked queries.	Annual report (PR-grade); 3 podcasts cumulative; first AI citation
---------------	--	--

Day 60 success metrics:

- 10 cornerstone pages live
- 3 podcast appearances completed (with backlinks)
- 5+ G2 reviews
- 100-300 LinkedIn followers in ICP (Sales Navigator filter)
- 5 inbound demos booked from organic
- Paid CAC < \$200 per demo booked (proof point that ads convert)
- AI search dashboard: LeadAC mentioned in 1-2 of 10 weekly benchmark queries

8.3 Day 61–90 — Compound + iterate

Goals:

- 10 G2 reviews (G2 ranking position improves)
- First customer case study published (with consent + metrics)
- First press placement (TechCrunch / The Information / SaaStr blog / Pavilion)
- First conference appearance (founder as speaker, not booth — SaaStr Annual, Pavilion CRO Summit, or vertical event like ServiceTitan Pantheon)
- Paid budget scaled to 3K–3K–5K/mo based on Day 60 CAC data
- Second vertical pack content live (/for/dental-practice-software)

Week-by-week:

Week 9	(a) /for/dental-practice-software page live. (b) First case study draft from pilot customer. © Paid LinkedIn Ads launched (\$2K budget, lookalike from customer list).	Wave 2 vertical; case study; LinkedIn
---------------	--	---------------------------------------

		audience scale
Week 10	(a) Case study published as cornerstone page (/customers/<name>). (b) Pavilion CRO Summit speaking submission or attendance. ☺ Press outreach — pitch The Information / TechCrunch / SaaStr on the “vertical SaaS revenue intelligence emerging category” angle.	First social proof page; PR pipeline started
Week 11	(a) /resources/[vertical]-sdr-playbook series — first 2 published. (b) Second podcast wave (target 2 more in this week). ☺ Paid Google Ads scaled to \$5K/mo if Day 60 CAC worked.	Vertical SEO compounding; paid scaled
Week 12	(a) Quarterly cycle review (positioning.md §13) — first formal Friday digest published. (b) AI search dashboard: target 3/10 LeadAC mentions. ☺ Day 90 metrics review: are we on track for \$50K MRR by Day 180?	Discipline anchor; AEO progress; finance check

Day 90 success metrics:

- 15+ cornerstone pages live
- 10+ G2 reviews; G2 Top 25 in “Sales Intelligence” or category ranking visible
- 5+ podcast appearances; first press placement
- 500-1,000 LinkedIn followers in target ICP
- 15 inbound demos/month from organic + 10 from paid = 25 total
- Paid CAC stable < \$250 per demo, LTV math indicates payback < 6 months
- AI search dashboard: LeadAC mentioned in 3/10 weekly benchmark queries
- 50K–50K–80K MRR target (10-15 paying customers @ 1.5K–1.5K–3K)

8.4 Risk gates (per cycle review, [positioning.md](#) §13)

MDCSV↔ Expand Full

Paid CAC > \$500/demo by Day 45	Day 45 paid review	Pause paid; double down on organic LinkedIn + community
LinkedIn followers < 100 ICP by Day 30	Day 30 review	Founder time on LinkedIn → reallocate from podcasts to content + commenting
Zero AI citation by Day 90	Day 90 review	Audit FAQPage schema; add Dataset schema; pursue G2 category listicle placement aggressively
Gong launches <\$30K/yr tier	Any time	Activate positioning crisis playbook (\$10)
Less than 5 HVAC paying customers by Day 90	Day 90 review	Re-evaluate beachhead — consider restaurant tech as primary (Wave 1 swap)

9. Asset shipping checklist

Concrete items to ship. Each is checkbox-binary. Maintain weekly. Anything past its target date triggers a §13 cycle-review note.

9.1 Identity assets

Logo SVG (light + dark + favicon) — already in `/public`

Brand guidelines one-pager (colors, fonts, voice extract) — derived from `globals.css` + §3

Founder LinkedIn profile optimization (headline, About, featured posts pinned)

Company LinkedIn page with tagline + description (§2.8 verbatim) + cover image

Twitter/X account (founder + company) with bio (§2.9)

G2 listing with full description + integrations + categories

Capterra listing

TrustRadius listing

Crunchbase entry with full description

LinkedIn “Featured” section on founder profile: top 3 posts + manifesto link + demo link

9.2 Cornerstone marketing pages (built by Day 30 / Day 60 / Day 90)

- / (homepage) refreshed with §2.7 hero
- /manifesto (Day 7)
- /vs/apollo-clay-gong refreshed (Day 14)
- /vs/gong (Day 21)
- /vs/clay (Day 21)
- /vs/apollo (Day 30)
- /for/field-service-saas (Day 28)
- /for/restaurant-tech-saas (Day 35)
- /for/dental-practice-software (Day 65)
- /pricing (Day 1)
- /about + /team (Day 10)
- /security (Day 30)
- /integrations/hubspot (Day 14)
- /integrations/smartlead (Day 45)

9.3 Technical AEO assets

- robots.txt with all AI crawlers allowed (Day 1)
- Organization schema on homepage + /about (Day 7)
- FAQPage schema on every cornerstone page (Day 30)
- Article + BreadcrumbList schema on resources (Day 30)
- Service schema on /pricing (Day 7)
- Dataset schema on benchmark report page (Day 56)
- Sitemap.xml live and submitted to Google Search Console + Bing Webmaster (Day 7)
- llms.txt convention file (Day 14) — Anthropic / OpenAI proposal for LLM-readable site maps
- Open Graph + Twitter Card meta tags on every page (Day 14)

Refresh dates (dateModified) visible in HTML + schema (Day 14)

9.4 Distribution assets

LinkedIn weekly post calendar (Day 1, ongoing — M/W/F)

Pavilion membership active (Day 15)

RevGenius + RevOps Co-op profiles active (Day 15)

Reddit account with 90-day organic history before commercial mention (start Day 1)

Podcast pitch list (Day 14) — SaaStr CRO Confidential, Topline, The Executive

(Pavilion), RevOps Co-op, Modern Sales Pros, 20VC

Speaker submission for vertical conferences (Day 30) — ServiceTitan Pantheon, Toast Big Restaurant Show, SaaStr Annual

Newsletter content sponsorship target list (Day 60) — Lenny's, Topline, Pavilion newsletter

Founder email signature + auto-responder updated (Day 1)

9.5 Conversion assets

/demo Calendly + booking form (Day 1)

Pilot pricing page with \$500 entry (Day 1)

Sample HVAC account brief (gated download) (Day 28)

Sample restaurant tech account brief (gated download) (Day 35)

2026 Vertical SaaS GTM Benchmark report (gated download) (Day 56)

First case study (1-page + 4-page versions) (Day 65)

Sales deck v1 (Day 30) — derived from §2.6

2-min demo video (Day 45) — sample account brief walk-through

HubSpot connector demo Loom (Day 30)

10. Crisis playbook

What to do if a competitor copies us, attacks us, or shifts the market in a way that threatens our positioning. Decision-ready, not panic-ready.

10.1 Scenario: Gong launches sub-\$30K/yr “Revenue Graph Lite”

- **Trigger:** Gong public announcement, pricing page change, or Battery Ventures / Sequoia portfolio newsletter mention
- **Day 0 action:** Founder writes a public LinkedIn post within 24 hours framing the move. Acknowledge it's a validation of the memory-layer thesis. Reiterate the four asymmetries (§1.2): substrate (operational vs conversation), CRM-native (HubSpot Card vs Gong UI), vertical specificity (Gong is horizontal), implementation time (1 hour vs 8 weeks).
- **Week 1 action:** Refresh /vs/gong page with the new pricing data and the same asymmetries argument. Push the page through founder LinkedIn + Pavilion + RevGenius.
- **Reverse D-005?** No — keep the vertical qualifier on “memory layer” framing. Now more important than ever because Gong is broadening their footprint.

10.2 Scenario: Apollo or Clay launches local-business signal libraries

- **Day 0 action:** Acknowledge in public; pivot competition to closed-loop learning (P-008 / whitespace closed-loop-icp) which they cannot easily replicate without our CRM-native outcome ingestion.
- **Week 1 action:** Sharpen /vs/clay and /vs/apollo pages with the “they have signals, we have memory of what closes” framing.

10.3 Scenario: A new entrant launches with our exact positioning

- **Day 0 action:** Founder reaches out personally — depending on the entrant, possible partner / talent acquisition / friendly competition.
- **Week 1 action:** Lean harder into the founder-led brand. The new entrant has zero brand equity; we have months of founder-led LinkedIn equity.
- **Don't:** Drop prices. Don't engage in price war. Lean into the asymmetric advantages: customer references, vertical depth, CRM-native UX maturity.

10.4 Scenario: A bad public review or G2 1-star

- **Day 0 action:** Founder responds publicly with empathy. Offers to make it right.
- **Week 1 action:** Post-mortem in cycle review. If product issue → fix it. If expectations issue → tighten ICP + onboarding wizard wording.

10.5 Scenario: Pilot conversion < 20% by Day 90

- **Trigger:** Day 90 review: less than 20% of pilots convert to paid Team tier.
- **Action:** Re-examine the pilot scope. Likely the 30-day pilot doesn't surface closed-loop value yet (M-09 query regen demo arrives at day 60-90 — pilot ends before customer sees it). Extend pilot to 60 days or pre-load the closed-loop demo with synthetic historical data.

End of LeadAC Brand & Marketing Assets v1 (2026-05-22). Lives alongside docs/positioning.md. Every shipped piece of marketing copy gets a row in positioning.md §9 (Messaging House). Every channel-spend decision goes through this doc's §5 and §6 first.
