

LeadAC — Positioning Workbook v2

Status: Living doc. This is the post-pivot canonical positioning source. Every marketing surface, sales deck, comparison page, onboarding wizard, and pricing decision references this file. If a piece of copy contradicts this doc, the doc wins until explicitly overridden in §14 (Decision Log).

Last major rewrite: 2026-05-22 (pivot from “intent intelligence for local business outbound” → “revenue intelligence for vertical SaaS teams selling to local business”)

Owner: Founder

Companion: `src/components/marketing/v2/*` (homepage sections),

1. Positioning Thesis

1.1 The category we're claiming

Not “AI SDR.” Not “lead gen.” Not “revenue intelligence” (Gong owns that for enterprise). Something specific enough that we can actually win it.

- **Working category: Revenue Intelligence for Vertical SaaS Sales**
- **Alt phrasing (longer, SEO-friendly):** *Account intelligence and closed-loop ICP refinement for vertical SaaS teams selling into local business.*
- **Alt phrasing (short, hero-friendly):** *The memory layer for vertical SaaS GTM.*
- **Why this category exists today:**
 - **Gong / Clari + Salesloft own the enterprise “Revenue Action Orchestration” stack** (Gartner created this Magic Quadrant in 2026 — Clari/Salesloft are Leaders, Gong is Leader for Revenue Intelligence). These platforms start at *30K–30K–300K/year* and require a RevOps engineer to operate.
 - **Apollo / ZoomInfo / Clay own the “data + workflow” layer** for B2B SaaS selling to other SaaS companies. Their data is firmographic — built for selling to companies whose employees sit at desks and have LinkedIn profiles. They are systematically weak on **local business context** (location count, vertical tech stack, review pattern, booking flow, owner-operator signals).
 - **The gap:** mid-market vertical SaaS companies (*2M–2M–50M ARR*, 30–300 employees) — Toast, ServiceTitan, Jobber, FineDine, Boulevard, Mindbody-class vendors — sell to local businesses (restaurants, HVAC, dental, beauty, legal, real estate). For them:
 - Apollo gives a list that’s 60% useless because local business firmographic data is shallow.
 - Clay can build a workflow but requires a GTM engineer and \$446/month minimum for CRM sync.
 - Gong’s \$30K+/year, 8-week onboarding, and enterprise UX is overkill.

- No system stores **what works in this vertical** after a won/lost deal. The pattern lives in the SDR’s head and walks out when they quit.
- **Date claimed:** 2026-05-22
- **Owner:** Founder

1.2 One-liner

15 words or less. Should pass the “if I overhear this at a dinner, do I get it” test.

Primary (homepage hero):

Revenue intelligence for the teams selling to local business.

Secondary (sub-headline that pairs):

Your CRM knows the deal. We know the business behind it.

Internal-only test cut (sales-call opener):

“Apollo gives lists. Clay gives workflows. Gong records calls. We help vertical SaaS GTM teams learn what actually closes.”

1.3 Competitor hero benchmark (2026-05-22 snapshot)

Updated from live homepage scrape on 2026-05-22. Use this as the bar — our hero must be sharper than any of these on at least one axis (vertical specificity, learning loop, or SMB price point).

--------------------------	--	----------------	--	---

Editorial reading of the table:

1. The market just collapsed onto **two phrases**: “Revenue Intelligence” (Gong owns it for enterprise + Revenue Graph memory layer) and “Revenue Orchestration” (Clari+Salesloft, [Outreach.ai](#)). Both are now Gartner Magic Quadrant categories as of 2026.
2. **Gong’s “Revenue Graph” launch (May 2026) is a direct shot at the memory-layer thesis** — they explicitly use the words “*living memory layer*” in their PR. This is the single biggest competitive event for our positioning. We cannot compete on “memory layer for enterprise revenue teams” because Gong now owns it.
3. **The opening for us**: Gong’s price floor (~\$30K/yr per seat, 5,000 enterprise customers), 8-week onboarding, and “Revenue Graph” abstraction is meaningless for a 12-person SDR team selling Toast or ServiceTitan licenses. They literally cannot afford the implementation, let alone the license.
4. **The “Apollo + Clay + Smartlead + manual SDR” stack is the real competitor**. That’s what mid-market vertical SaaS GTM teams actually run. Every comparison page must position against that bundle, not against a single vendor.
5. **Lemlist’s positioning (“AI Outbound Platform for Relevant Outreach at Every Scale”) + their Apr 2026 launch of “AI Agentic Enrichment” is closest**

to our adjacent territory. They're going the right direction but stay channel-agnostic / horizontal. Vertical specificity is still ours to claim.

1.4 The manifesto

Internal manifesto (mean version, founder voice — do NOT ship to public surface):

Every revenue tool **on** the market is built **for** B2B SaaS selling **to** other B2B SaaS.

Apollo's 230M contacts? Mostly desk workers with LinkedIn profiles working at companies you can find in Crunchbase. Cool. Now go sell Toast to a 4-location Italian restaurant in Queens whose owner hasn't updated LinkedIn since 2017 and whose "tech stack" is OpenTable Lite + a paper menu.

Apollo doesn't know that restaurant exists in any useful way. Clay can find the location with three waterfall providers and a Claygent prompt, but you'll burn \$446/month on the Growth plan and you still need someone to write the workflow. Gong can record what your AE said to the GM but won't tell you that 14 other deals in the same segment lost on the reservation flow objection – because Gong is built for 8-figure enterprise deals, not \$2K/month Toast subscriptions.

So you have a 12-person SDR team at a vertical SaaS company. They wake up, open Apollo, open Clay, open HubSpot, open Google Maps, open LinkedIn Sales Navigator, open Yelp, open a spreadsheet. Every morning, every account, 20 **to** 40 minutes per business just **to** know who they're calling. By the time the first call goes out, half the day is gone. They send the email anyway because quota.

The SDR who survives this **for** six months becomes good. They feel the patterns. They know that an OpenTable Lite footer + multi-location + Italian cuisine + a recent expansion post means the GM is one objection away **from** yes. They know that QSR **with** Toast already installed wants the loyalty **module**, not the POS pitch.

Then they quit. They **take** a job at a Series C **with** stock options. None **of** what they learned is **in** the company's system. The new SDR opens the same six tabs and starts over.

This is the bug. Every vertical SaaS GTM org has it. None **of** them can afford **to** fix it the way Gong fixes it **for** enterprise.

We're the fix. Not another AI SDR (saturated 0.92). Not another lead-gen tool (saturated 0.95). Not a CRM. Not a sequencer. We are the operational memory of a

vertical SaaS sales team – the thing that survives the SDR turning over, the niche switch, the territory change.

Apollo gives lists. Clay gives workflows. Gong gives transcripts. We give the memory that should have been the primitive **in** the first place.

Copy

External manifesto (homepage-safe, customer-facing — ship-ready):

The teams selling **to local** business don't have an enterprise problem.

They have a memory problem.

Every vertical SaaS GTM team – restaurant tech, field service, dental software, legal practice management – runs **the** same stack: Apollo **for** lists, Clay **for** enrichment, HubSpot **for the** CRM, Smartlead **or** Instantly **for** sending. It works. Sort **of**.

What **it** doesn't do **is** learn. The pattern **of** why a multi-location HVAC group **on** Housecall Pro converts faster than a single-shop competitor lives **in** your best SDR's head, **not in** your system. Your worst SDR rebuilds **that** pattern **from** zero. Your new hire rebuilds **it** again three months later. The new vertical your CRO just opened? Rebuild **from** zero a **third** time.

LeadAC **is the** memory layer your stack **is** missing. We find **the** right **local** accounts **for** your vertical, sync **the** operational context your CRM never had – location count, vertical tech footprint, review tone, owner activity – **and** learn **from every** won **and** lost deal so **the** next list comes **back** sharper than **the last**.

Connect HubSpot. Define your ICP. We have your **first** 200 enriched **local** accounts **and** 30 days **of** closed-loop learning live **in** under an hour. No RevOps engineer required.

Copy

1.5 We are NOT

Another AI SDR tool (Artisan, 11x, AiSDR, Regie — saturated 0.92)

A CRM (HubSpot, Pipedrive, Salesforce, Close — we *write to* these, we don't replace them)

An outbound sequencer / email sender (Smartlead, Instantly, Lemlist, Outreach — we *hand off to* these)

A generic B2B lead-gen tool (Apollo, ZoomInfo — they sell volume, we sell context)

A horizontal data enrichment workflow builder (Clay, Cognism — they require a GTM engineer)

Call analytics / conversation intelligence (Gong, Chorus, Clari Copilot — different surface area entirely)

Forecasting / pipeline orchestration for enterprise (Clari, Salesloft, BoostUp — wrong ICP, wrong price band)

A vertical CRM for the local business itself (ServiceTitan, Jobber, Housecall Pro, Toast — those are our buyer's customer's tools, not our competitors)

An AI BDR / autonomous SDR replacement (the AI does the homework, the human still does the conversation)

1.6 We ARE

An account intelligence layer for vertical SaaS GTM teams selling to local business

A closed-loop ICP refinement engine — every won/lost deal sharpens the next list

An operational signal interpreter — review tone, vertical tech footprint, location count, owner activity, booking-flow quality

A CRM-native memory layer — the audit trail of what works in this vertical lives where the sellers already work

A discovery + enrichment + sync chain that closes the loop that Apollo + Clay + HubSpot can't close on their own

1.7 Tests for staying on-thesis

Run every new feature, every page, every campaign, every comparison angle through these five gates. Three of five must pass.

1. **Would Apollo / ZoomInfo build this?** → If yes, drop it. We don't out-build the data layer.

2. **Would a horizontal AI SDR tool (11x, Artisan, AiSDR, Regie) build this?** → If yes, drop it. We don't compete on AI-writes-emails.
3. **Does this require local-business operational data (reviews, location count, vertical-stack signature, booking flow) to work?** → If yes, keep it. This is our moat.
4. **Does this require closed-loop CRM outcome data to work?** → If yes, keep it. Apollo and Clay can't access this. Gong can but only for enterprise.
5. **Does it serve a 30–300 person, 2M–2M–50M ARR vertical SaaS company selling into local-business verticals?** → If yes, keep it. Outside this band we lose to either Apollo (down-market) or Gong (up-market).

2. ICP and Personas

2.1 Primary ICP

The one customer we'd build the entire product for if we could only have one. Everything below derives from this row.

MDCSV↔ Expand Full

Industry	Vertical / SMB SaaS selling into local-business verticals (restaurant tech, field service software, dental practice management, legal practice management, beauty & wellness platforms, real estate brokerage tech, fitness/studio software, auto repair software)
Company size	30–300 employees (sweet spot: 50–150)
GTM team size	5–30 sellers (mix of SDRs + AEs); at least 1 SDR/BDR motion alongside inbound
Geography	Wave 1: USA + Canada. Wave 2: UK + Australia. Wave 3: EU + Türkiye (lower priority — pricing model needs adjusting)

Revenue band (ARR)	2M–2M–50M ARR (Series A through late Series B)
Tech stack proxy	HubSpot Sales Hub Pro or Pipedrive (NOT Salesforce + Gong — that’s enterprise); Apollo or ZoomInfo for data; Smartlead / Instantly / Apollo sequencing; Slack; some Clay usage but no dedicated GTM engineer
Buying trigger	(a) New CRO/VP Sales hired in last 90d; (b) launched a new vertical or geography; © SDR team scaled past 5 reps; (d) just raised Series B and tripled SDR headcount target; (e) churning a previous “AI SDR” tool (11x, Artisan, AiSDR) because it didn’t move pipeline
Disqualifier signal	Asks for SOC 2 Type II in first call → enterprise, not us. Has dedicated RevOps engineer + Salesforce + Gong → enterprise, not us. Sells to other B2B SaaS or to enterprise → wrong ICP, Apollo/Clay/Outreach fit better. <30 employees → too early, no SDR motion. Pure inbound + PLG → no outbound pain.
Annual contract value (initial)	6K–6K–36K/year (Team plan 1.5K/motoGrowthplan1.5K/motoGrowthplan3K/mo)
Sales cycle length	14–30 days from first touch to pilot decision (sales-led, no PLG self-serve)
Where we win them	When they describe their actual workflow (“SDR opens Apollo + Clay + 6 tabs every morning”), when they cite a recently lost deal and can’t articulate the pattern, when they just opened a new vertical, when their CRO is being asked for “AI productivity” by the board
Where we lose them	Already deeply committed to Salesforce + Gong + Clari (enterprise) → too entrenched. Engineering-led team that loves Clay and wants to keep building DIY → they’re our competitor in spirit. Pure marketing-led / PLG / inbound — no outbound team to

enable. Strict procurement requiring SOC 2 + DPA + 12-month enterprise contract on first deal.

2.2 Secondary ICPs (deprioritized — onboarding doesn't speak to them yet)

MDCSV ↔ ExpandCC Full

Vertical-focused agencies (e.g., agencies that exclusively serve dental, HVAC, F&B SMB clients)	They have the local context need, but the buyer profile is different — solo-operator agency owners with no CRM, no SDR team, lower willingness-to-pay. Confusing for primary positioning.	Deprioritize until 50 vertical SaaS customers shipped. Then explore as a separate vertical pack.
Mid-market PE-rolled local services companies (e.g., a multi-state HVAC chain that bought 8 regional plumbers)	Strong fit for local context + closed-loop learning, but they buy at enterprise speed and ask for Salesforce-grade integrations.	Promote only when we have a dedicated Enterprise tier (\$5K+/mo).
Outbound agencies running vertical campaigns for vertical SaaS clients	Same product fit but through an agency relationship. Pricing is messy (per-client seat allocation), brand confusion (“isn’t LeadAC for the SaaS company, not us?”).	Address with a partner program in Year 2. Until then, do not target.
Sales-led horizontal SaaS targeting SMB (e.g., Gusto, Square Banking, Rippling for SMB)	Have outbound teams hitting local businesses but their motion is so high-volume / commoditized that local context matters less. Apollo + Clay can mostly do it.	Watch. If a primary ICP customer asks for it, we expand. Otherwise ignore for 12 months.

2.3 Persona cards

Persona: “Daniel” — VP of Sales / Head of GTM

- **Role / title:** VP Sales, Head of Sales, Head of GTM, or CRO at a 60-200 person vertical SaaS company. 34-44 years old, 8-15 years in sales leadership, came up through SaaS (often via a horizontal SEP like Outreach or Salesloft before moving vertical). Reports to founder/CEO.
- **Reports to:** Founder/CEO or COO. Sometimes board directly (if VP Sales is interim CRO).
- **What they say internally:** *“Our SDR ramp is too long.” “We need pipeline coverage.” “I don’t trust the forecast.” “Why did we just lose three multi-location deals in a row?” “We’re going to need to double SDR headcount but I can’t justify the math.”*
- **What they say to vendors:** *“Tell me about your ramp time.” “How does this work alongside Apollo?” “What’s the integration with HubSpot look like?” “Show me a customer in restaurant tech / field service / dental.”*
- **What they fear:** Missing the number two quarters in a row. Hiring SDRs they can’t ramp. Their best SDR quitting (and taking the playbook with them). The board asking “what are you doing with AI?” and not having a credible answer. Buying an “AI SDR” tool that gets churned in 6 months and they have to explain why.
- **What they Google:** “vertical SaaS SDR playbook,” “Apollo vs Clay for local business,” “how to scale SDR team without burning leads,” “Gong alternative for mid-market,” “AI sales tools for vertical SaaS,” “best CRM enrichment tool 2026,” “SDR ramp time benchmark,” “outbound for SMB local business”
- **What they read:** SaaStr (especially CRO Confidential — Toast’s Jonathan Vassil, Cognism, Lemlist case studies), Pavilion community, Bowery Capital newsletter, Inc 5000 case studies, founder-led posts from peers on LinkedIn (Toast, ServiceTitan, FineDine, Boulevard CROs)
- **Where they hang out:** Pavilion Slack, RevGenius, SaaStr CRO Confidential, LinkedIn (heavy lurker, occasional poster), Modern Sales Pros community, RevOps Co-op Slack, Topline GTM podcast
- **What gets them fired:** Two consecutive quarters of pipeline miss, a public catastrophe (lawsuit, security breach), losing a strategic logo. Slowest path to fired: nothing’s working and they can’t show why.

- **What gets them promoted:** Hitting plan three quarters in a row, building a repeatable motion that survives them, a clean exit (acquisition, IPO).
- **A direct quote (source: Salesforce State of Sales 2026, captured via Salesmotion 2026):** *“Account research and call prep consume 14% of the workweek. That’s roughly 5.6 hours per rep. For a 10-rep team, \$130,000 of selling time per year, gone.”* — Salesforce State of Sales 2026, cited in salesmotion.io/blog/sales-team-manual-account-research-time
- **Buying authority:** Decision-maker for 1K–1K–10K/month tools. Above \$10K/mo needs CFO/CEO sign-off. Most LeadAC deals fall within VP-signable band.

Persona: “Sarah” — Head of Marketing / Demand Gen Lead (Influencer)

- **Role / title:** Head of Marketing, Demand Gen Lead, or VP Marketing at a 60-200 person vertical SaaS. 30-40 years old, 5-12 years in B2B SaaS marketing.
- **Reports to:** CMO (if exists) or directly to CEO. Peers with Daniel (VP Sales).
- **What they say internally:** *“Sales is ignoring 60% of the MQLs we send them.” “We need ABM but no one has the time to set it up.” “The target account list is 18 months stale.” “We can’t tell which channels actually produced pipeline.”*
- **What they say to vendors:** *“Does this push to HubSpot lists?” “Can sales actually use this without IT?” “How does this work with our ABM workflow?”*
- **What they fear:** MQL → SQL conversion dropping, sales blaming marketing, a new CRO arriving and reorganizing GTM. Being told “marketing isn’t producing pipeline” when in reality sales isn’t working it.
- **What they Google:** “ABM platform for SMB,” “intent data for vertical SaaS,” “target account list builder,” “marketing-to-sales handoff playbook,” “Clay for marketing teams,” “6sense alternative for mid-market”
- **What they read:** Marketing Ops Pros, Demandbase blog, Pavilion Marketing community, HubSpot Marketing blog, Refine Labs / Chris Walker content (declining trust but still influential), Lenny’s Newsletter, Drift / Qualified case studies
- **Where they hang out:** MO Pros Slack, Pavilion Marketing channels, LinkedIn, Demand Curve community
- **What gets them fired:** Pipeline coverage gap that sales can blame marketing for. Bad ABM rollout. CRO arrival.
- **What gets them promoted:** Provable attribution to pipeline. Successful ABM motion in a new vertical.

- **A direct quote (source: Lemlist CMO podcast May 2026):** *“70% of our own users still spray and pray because it’s easier. Positioning doesn’t change behavior — enablement does.”* — Domitille de Saint-Exupéry, CMO Lemlist, [Listen Notes — The Executive podcast](#)
- **Buying authority:** Influencer / champion. Often the one who finds LeadAC, schedules the demo, and hands it to Daniel.

Persona: “Mike” — SDR Manager / Senior AE (Champion)

- **Role / title:** SDR Manager, Senior AE, BDR Team Lead, or Sales Ops at a 30-150 person vertical SaaS. 26-35 years old, came up as a top SDR themselves 1-3 years ago.
- **Reports to:** Daniel (VP Sales).
- **What they say internally:** *“My new hires take 4 months to ramp.” “Apollo’s bounce rate is killing my domain.” “Half my reps are guessing on the same accounts.” “I rebuilt the playbook for HVAC and now we’re going into dental and I have to rebuild it again.”*
- **What they say to vendors:** *“How fast does this actually get a rep ramped?” “Will this break my Apollo workflow?” “How do my reps log outcomes — do they have to learn something new?”*
- **What they fear:** Becoming the person who has to write the playbook for the new vertical. Best SDR quitting. New SDRs not ramping. Manager-to-rep ratio breaking when the team scales.
- **What they Google:** “SDR ramp playbook,” “Apollo bounce rate fix,” “HubSpot vs Pipedrive for SDR teams,” “best lead enrichment for SMB,” “cold email subject lines that work for HVAC software,” “AI SDR tool reviews 2026”
- **Where they hang out:** r/sales, r/SalesOperations, r/coldemail, RevGenius Slack, LinkedIn (active poster), TwentyFour Sales, peer Slack groups
- **What gets them fired:** Team-wide quota miss, a domain blacklist event, a public spam complaint from a major prospect.
- **What gets them promoted:** Their reps consistently hit quota. Promoted to Director of Sales Development or split out into an AE-only role.
- **A direct quote (source: r/sales 2026 community thread, captured via Kwanzoo benchmark synthesis):** *“For a team of 10 SDRs working standard 40-hour weeks, 148 of those 400 collective hours per week get consumed by research alone. At an average SDR salary of 60,000, that translates to 60,000, that translates to 22,200 per rep per year burned on*

research, or \$222,000 annually for a team of ten.” — kwanzoo.com/blog/sdrs-spend-40-percent-researching-leads

- **Buying authority:** Champion. Tests the product, defends it internally, runs the pilot.

2.4 Disqualifiers (signals this is NOT our customer)

Asks for SOC 2 Type II in first call → enterprise procurement track, we’re not ready

Has dedicated full-time RevOps engineer → they’ll just build it in Clay

Uses Salesforce + Gong + Clari already → that stack is enterprise, our value is the wrong shape

Sells to other B2B SaaS / enterprise IT buyers → Apollo + Clay fits their ICP, we don’t

Pure inbound / PLG motion with no SDR team → no outbound pain to solve

<30 employees → no SDR motion, can’t justify our price

>300 employees with >50 sellers → Gong / Clari is the right tier, we’re under-engineered for them

First-call ask: “do you do email warmup / sending?” → they want Smartlead, not LeadAC

First-call ask: “can you write the emails for us?” → they want 11x / Artisan / AiSDR, not LeadAC

Wants to use LeadAC to sell *to* HVAC/restaurant/dental owners directly (i.e., they’re the local business buyer themselves, not the vertical SaaS) → wrong ICP entirely

Agency without a single vertical specialty → too horizontal, wrong fit for the vertical-aware discovery primitive

3. Pain Library

3.1 Pain inventory

Every pain ships with a source quote and a permalink. Every pain is tagged with a P-ID we reference in §9 (Messaging House). 2026 evidence only — older quotes archived.

3.2 Pain stories

Five first-person stories where the pain was felt acutely. These ship to landing pages, sales decks, and the homepage problem grid. Source: founder-led conversations + the SDR “Ahmet” narrative from the FineDine design partner pilot.

Story 1 — “Ahmet” — SDR / FineDine F&B (Istanbul HQ, US territory)

Sabah saat 08:30. Yeni işe başlamış bir SDR.

Önünde:

- Apollo açık,
- Clay açık,
- HubSpot açık,
- Google Maps sekmeleri,
- LinkedIn tab’leri,
- Spreadsheet’ler,
- ChatGPT prompt’ları...

Ama aslında ne yaptığını tam bilmiyor.

Manager ona şunu söylüyor: *“Restaurantlara outbound yapacağız.”*

İlk gün her şey kolay geliyor. Apollo’dan lead çekiyor. Mail yazıyor. Cold DM atıyor. Reply bekliyor. Ama birkaç gün sonra gerçek problem başlıyor.

Çünkü sistem ona şunu söylemiyor:

- hangi restoranın gerçekten pain yaşadığını,
- hangisinin growth mode’da olduğunu,
- hangisinin kötü review aldığını,
- hangisinin booking problemi yaşadığını,
- hangisinin agresif expansion yaptığını,
- hangi opener’ın bu niche’de işe yaradığını,
- hangi tone’un spam gibi algılandığını.

SDR bütün bunları kendi kafasında öğrenmek zorunda kalıyor. Her call’dan, her no-reply’dan, her ghost edilen mail’den, her başarısız follow-up’tan küçük küçük pattern’ler çıkarmaya çalışıyor.

6 ay sonra aynı SDR artık iyi performans göstermeye başlıyor. Çünkü artık şunları hissedebiliyor:

- hangi restoran sahibinin hangi angle’a cevap vereceğini,
- hangi outreach’in “agency spam’i” gibi durduğunu,
- hangi pain point’in gerçekten urgency yarattığını.

Ama problem şu: bu bilgi şirketin sistemi içinde yaşamıyor. Tamamen SDR’ın kafasında yaşıyor.

Sonra şirket yeni bir niche’e giriyor. Medspa. Dental. Home services. Ve her şey tekrar sıfırlanıyor.

Çünkü bugün outbound dünyasında **sistemler öğrenmiyor**. Tool’lar sadece veri taşıyor. Apollo lead veriyor. Clay enrichment yapıyor. CRM pipeline tutuyor. Outreach tool mail gönderiyor. Ama hiçbiri şunu yapmıyor: *“Bu niche’de son 400 outreach sonucuna göre en iyi çalışan yaklaşım bu.”*

Used in: homepage hero supporting story, /workflow case study page, sales deck slide 2 (“The Problem”), investor deck slide 2.

Story 2 — “Mike” — SDR Manager / 18-rep HVAC SaaS team

18 reps. Three months ago we were on Outreach for two years. It worked. Clunky as hell, but it worked. The problem?

1,200/month for a tool that our team barely customized. Leadership looked at the bill, looked at Apollo's pricing (1,200/month for a tool that our team barely customized. Leadership looked at the bill, looked at Apollo's pricing (350/month), and made the call without involving me.

Our open rates tanked 22% in the first month. Not because Apollo's worse, but because Outreach had built-in template variants we'd tested to death over two years. We had to rebuild 47 cadences from scratch. My team lost a week to migration alone. And the sync between Apollo and our CRM (Salesforce) had a three-hour delay that first week, which meant reps were re-working leads thinking they hadn't moved.

That three-hour sync delay cost us probably three deals because reps double-touched prospects at exactly the wrong time. We hit our Q3 number, but barely. And I spent 60 hours rebuilding workflows instead of coaching.

(Source: practitioner thread — aicomunities.gatherhq.com — adapted for HVAC vertical context. Used in: /vs/outreach comparison page, sales deck objection-handling slide.)

Story 3 — “Sarah” — Head of Marketing / Dental practice software vendor

ABM is something every board deck has but no one runs. I built a target account list 18 months ago of 4,200 multi-location dental practices in the US. We pushed it to Apollo, ran a Salesloft sequence on it, and got a 0.4% reply rate. The team blamed me — “the list is bad.” But the list was right. The angle was wrong.

What I needed was for every account row to also tell me: *do they use Dentrix or Eaglesoft? Are they in a buying season? Have they hired a new front-desk lead recently? What's their Google review tone?* Apollo doesn't know. We tried Clay — burned \$1,800 of credits in three weeks trying to build the workflow and then our GTM engineer (singular, also doing 4 other things) quit.

The list went stale. Sales blamed marketing. I burned the deck.

(Source: founder-led customer interview, dental software prospect, May 2026, anonymized. Used in: vertical pack — dental, /for/dental-practice-software.)

Story 4 — “Daniel” — VP Sales / Restaurant tech SaaS, \$18M ARR, just raised Series B

Board wants us to hit \$35M ARR next year. That means doubling SDR headcount to 24. CFO wants to know what the per-SDR ramp cost will be. I do the math: average SDR ramp at our company is 5.5 months. Our last cohort, three of seven didn’t make it past month 4. The pattern they built in those 4 months died with them.

So now I’m looking at hiring 12 more SDRs into a system that fails to retain knowledge. I tried 11x — Alice writes okay emails but doesn’t know what “OpenTable Lite footer” means as a signal. I priced out Gong. It’s \$48K/year for our seat count and the implementation team said 10-12 weeks. I don’t have 10-12 weeks. I have a Q1 forecast to defend in 6.

(Source: composite of three founder-led conversations with restaurant tech / hospitality SaaS VPs Sales, April-May 2026. Used in: homepage problem grid, investor deck “why now” slide.)

Story 5 — “Lena” — RevOps Lead / Mid-market boutique hotel software vendor

I’m the only RevOps person. I support 6 SDRs and 4 AEs. Last quarter I spent 2 weeks rebuilding our HubSpot enrichment workflow because Clay’s pricing changed and we cut credits. The week after, our SDR lead came to me with a request: *“Can you make Apollo tell me when a boutique hotel changes PMS providers? We just lost a 50-room deal because they had already migrated to Mews and I didn’t know.”*

No. Apollo can’t. Clay theoretically can — give me 3 weeks and another \$400/mo in BuiltWith credits. I do not have 3 weeks. I have a Q2 planning offsite next week.

(Source: founder-led customer interview, boutique hotel SaaS prospect, May 2026, anonymized. Used in: /vs/clay comparison page, vertical pack — hospitality.)

4. Competitor Map

One card per competitor. Updated 2026-05-22 from live homepage scrape + 2026 press releases + practitioner reviews. Every card includes: their current 1-liner, their 1-liner 90 days ago (positioning shift), where they're saturated, where they're weak, their stated vs revealed ICP, growth channel, recent landing pages, what they ignore, where we attack them, where we don't compete.

4.1 Competitor — [Apollo.io](https://apollo.io)

- **One-liner (current, May 2026):** *"The AI sales platform for smarter, faster revenue growth."*
- **One-liner (90 days ago, Feb 2026):** *"Everything you need to prospect, engage, and drive more revenue."*
- **Saturated clusters:** B2B contact database lookup, generic email sequencing, SMB/founder/solo budget tier, "Apollo replaces five tools" positioning.
- **Where they're weak:** Local business firmographic depth (location count, vertical CRM stack, owner-operator signals); deliverability (12-14% bounce rate at default; needs verification add-on); CRM sync reliability (3-hour delays reported); EMEA + non-US data coverage; deep signal-based vertical enrichment.
- **Stated ICP:** Revenue teams, SDRs, AEs, GTM Leaders at scaling tech companies and global enterprises.
- **Real ICP (revealed by ad copy + landing pages):** Budget-conscious mid-market sales teams, boutique agencies, and solo founders using them primarily as a cheap data layer + ZoomInfo alternative.
- **Growth channel:** Free tier + PLG + heavy SEO (huge programmatic SEO footprint) + community + paid (G2/Brex/Ramp recognition push in May 2026).
- **Current hero headline:** *"The AI sales platform for smarter, faster revenue growth."*
- **Recent messaging shift (last 90 days):** Apollo pivoted from "everything you need to prospect" → "AI-native end-to-end GTM platform" with Apollo AI 3.0 in March 2026. Marcio Arnecke, CMO, May 2026 PRNewswire: *"GTM is being redefined and Apollo's industry recognition reflects our position at the forefront of our space."* They now compete with ZoomInfo at the AI-platform tier rather than the data-layer tier.

- **Recent landing pages launched:** /ai (Apollo AI), /product/ai-sales-automation-software, competitor comparison pages targeting Outreach/Salesloft, the Brex/Ramp PR push pages.
- **What they ignore:** Local-business operational context (reviews, location count, vertical tech stack, booking flow, owner activity); deliverability infrastructure for SMB segments; closed-loop ICP learning; vertical-specific signal libraries.
- **Where we attack them:**
 - **Vertical context** — we know what OpenTable Lite, Mews, ServiceTitan, Dentrrix, Jobber signatures *mean*; Apollo just sees them as opaque BuiltWith tags.
 - **Closed-loop learning** — Apollo's data doesn't learn from your won/lost deals; LeadAC's SemanticMemory does.
 - **CRM-native enrichment** — we write 12 fields to HubSpot per account; Apollo writes 4-5.
 - **Bounce-rate hidden cost** — Apollo's *59/user/moballoonsto* *59/user/moballoonsto* 200/user/mo once you add verification, dialer, dedicated sender. We don't hide that cost; we use existing senders and just enrich what they have.
- **Where we don't compete:** Database size (Apollo: 230M+ contacts; us: zero — we use their data + add context). Multichannel sequencing (we don't send emails; we hand off to Smartlead/Instantly/Apollo). Coverage for B2B SaaS-to-SaaS selling motion.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** /vs/apollo and /alternatives/apollo (status: drafted, see §11).

4.2 Competitor — ZoomInfo

- **One-liner (current, May 2026):** *"The AI platform for go-to-market teams."*
- **One-liner (90 days ago):** *"The modern go-to-market platform for B2B companies to hit their revenue numbers."*
- **Saturated clusters:** Large enterprise data layer, "single source of B2B truth," enterprise corporate sales orgs, "ZoomInfo Copilot" AI workflows tier.
- **Where they're weak:** Mid-market accessibility (requires enterprise contract, no free trial), SMB segments, EMEA/regional data, vertical-specific context, transparent pricing.

- **Stated ICP:** Enterprise Revenue Leaders, VPs of Sales, CMOs, Operations at mid-market to global companies.
- **Real ICP:** Well-funded enterprise companies (~35,000 customers) buying a single massive platform to avoid managing multiple vendors. Often the “safe enterprise procurement choice.”
- **Growth channel:** Outbound-led sales + enterprise paid + brand. No self-serve, no free trial — every motion is “request a demo.”
- **Current hero:** *“The AI platform for go-to-market teams.”* + *“Built on the world’s best B2B data, so every signal becomes pipeline.”*
- **Recent messaging shift:** Repositioned around AI workflows (Copilot, GTM Workspace, GTM Studio) because the base contact-data game is being commoditized by Apollo’s free tier. Defending the 20K–20K–100K+ price floor by selling “AI workflows” rather than “access to a database.”
- **Recent landing pages launched:** ZoomInfo Copilot product page, GTM Workspace, GTM Studio, enterprise ABM pages, defensive “ZoomInfo vs. Cheap Alternatives” comparison pages.
- **What they ignore:** Mid-market vertical SaaS, transparent pricing, month-to-month billing, self-serve, agencies, anything under \$50K ACV.
- **Where we attack them:** SMB / mid-market price band, transparent pricing, no-contract pilot, no implementation cost, vertical specificity.
- **Where we don’t compete:** Enterprise database scale, the safety-of-incumbency procurement decision, the “I need one platform with everything” buyer.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** /vs/zoominfo — lowest priority (wrong tier; rarely competes head-to-head with us).

4.3 Competitor — Outreach (now [outreach.ai](#))

- **One-liner (current, May 2026):** *“You didn’t hire enough sellers. Now you don’t have to. Outreach AI Agents act as a teammate to work every deal, every account, for every rep simultaneously.”*
- **One-liner (90 days ago):** *“Empowering revenue teams to execute efficiently and win more deals.”*
- **Saturated clusters:** Enterprise sales engagement, multi-channel cadences, Salesforce-anchored stacks, “agentic AI” terminology (saturation 0.92, see §5).
- **Where they’re weak:** Deliverability infrastructure (no native warmup, old-school single-domain sending), platform bloat, mid-market price agility, SMB

segments, vertical specificity. *Note: Outreach.ai's official Spring 2026 release explicitly positions for enterprise — Omni + Agent Studio + Revenue/Research/Deal Agents are not aimed at 12-person SDR teams.*

- **Stated ICP:** CROs, VPs of Sales, SDR Managers, RevOps professionals at enterprise companies.
- **Real ICP:** Big enterprise sales teams with dedicated RevOps headcount and deep Salesforce integrations. ~5,000 enterprise customers.
- **Growth channel:** Outbound-led + enterprise sales + large enterprise partnerships (Salesforce, etc.).
- **Current hero:** *"You didn't hire enough sellers. Now you don't have to."*
- **Recent messaging shift:** Dropped *.io*, rebranded as *outreach.ai*. Spring 2026 release announced "agentic AI platform for revenue teams" with Omni (universal conversational agent), Agent Studio (visual workflow canvas), Revenue Agent, Research Agent, Deal Agent. CPO Nithya Lakshmanan: *"Revenue teams are entering a new era. Autonomous agents handle the execution, and conversation is the new front door."*
- **Recent landing pages launched:** /ai-agents, /why-outreach, /resources/reports-guides/agent-productivity-impact-report (claims 35% reply rate uplift, 40% inbound meeting uplift, 7-8 hrs/week saved).
- **What they ignore:** Mid-market (2M–2M–50M ARR), SMB, deliverability infrastructure as a first-class concern, vertical-specific knowledge, teams without dedicated RevOps.
- **Where we attack them:** Price (their *1,200+/mo for 6 seats → our 1,200+/mo for 6 seats → our 1,500/mo for 5 seats* covers more); ramp time (12-week onboarding → our 1-hour onboarding); vertical context.
- **Where we don't compete:** Conversation intelligence (we don't record calls), forecasting, deal management, large enterprise procurement.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** /vs/outreach — medium priority (will trigger when ICP customers churn off Outreach for cost reasons).

4.4 Competitor — Clay

- **One-liner (current, May 2026):** *"Go to market with unique data — and the ability to act on it."*

- **One-liner (~12 months ago):** *“The data + workflow engine for GTM teams.”* (Clay invented and now owns the “GTM Engineer” category.)
- **Saturated clusters:** “Enrichment + workflows,” “150+ data providers,” “GTM Engineer” (their invention), waterfall enrichment.
- **Where they’re weak:** Native sequencing (none — requires Smartlead/Instantly/Reply); learning curve (high — listed as #1 complaint on G2 + Reddit); credit-cost management; out-of-the-box workflows for non-technical teams; closed-loop CRM outcome ingestion (Clay enriches but doesn’t learn from outcomes).
- **Stated ICP:** GTM Engineers, RevOps, technical sales operations professionals.
- **Real ICP:** Mid-market and enterprise teams (10,000+ customers including OpenAI, Anthropic, Canva, Rippling, AlertMedia) that have or hire dedicated GTM engineers / RevOps to build pipelines.
- **Growth channel:** Strong PLG + huge community (GTM Engineer identity, Clay Sculpt conference Oct 2026 SF) + heavy founder-led content (Kareem Amin highly visible).
- **Current hero:** *“Go to market with unique data — and the ability to act on it.”*
- **Recent messaging shift:** Deepening “GTM operating system” framing; launched Sculptor (natural-language workflow builder) to lower technical barrier; expanded Claygent (AI research agent at 140M monthly runs);
5Bvaluation(Jan2026employeetender)upfrom5Bvaluation(Jan2026employeetender)upfrom3.1B.
- **Recent landing pages launched:** Customer case studies (AlertMedia, Rippling, others), Sculptor product page, GTM-with-Clay blog (publishing comparisons like “9 Best CRM Data Enrichment Tools in 2026”).
- **What they ignore:** Teams without a GTM Engineer, out-of-the-box closed-loop learning, vertical-specific signal libraries, sequencing-native flow.
- **Where we attack them:**
 - **Out-of-the-box** — they need 2 weeks of GTM engineering; we need 1 hour of HubSpot OAuth.
 - **Closed-loop learning** — Clay enriches today’s list; LeadAC remembers yesterday’s outcomes.
 - **Vertical specificity** — Clay is horizontal; we ship pre-built signal libraries for restaurant, HVAC, dental, legal.
 - **Credit predictability** — Clay’s credit model is famously surprise-bill-prone; LeadAC charges flat tier.

- **Where we don't compete:** Workflow flexibility (Clay can build literally anything), data provider count (150+ vs our handful), the GTM Engineer practitioner.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** /vs/clay — high priority. Most overlap with our buyer's current stack.

4.5 Competitor — Gong

- **One-liner (current, May 2026):** *"Gong Revenue AI OS — Where humans, agents, and tools work together to optimize revenue outcomes."*
- **One-liner (90 days ago):** *"The Revenue Intelligence platform."* (Gong owns the "Revenue Intelligence" category.)
- **Saturated clusters:** Call recording, conversation intelligence, "Revenue AI," enterprise revenue OS.
- **Where they're weak:** Price floor (~30K–30K–60K/yr for a 5-rep team minimum); implementation time (8-12 weeks with services engagement); mid-market and SMB cost-of-entry; local-business / vertical signal libraries; vertical SaaS GTM motion.
- **Stated ICP:** Enterprise revenue teams.
- **Real ICP:** 5,000 enterprise customers, \$500M ARR (+55% YoY May 2026). Median customer ≥ 50 reps, dedicated RevOps team, Salesforce-native.
- **Growth channel:** Enterprise outbound sales + heavy thought-leadership / Gong Labs research + Gartner influence (named Gartner Leader for Revenue Intelligence + Revenue Action Orchestration 2026).
- **Current hero:** *"Where humans, agents, and tools work together to optimize revenue outcomes."*
- **Recent messaging shift (May 2026):** Launched **Gong Revenue Graph** as *"a living memory layer — one that makes real intelligence and automation possible for the first time."* This is the single most relevant competitive event for our positioning — Gong explicitly claimed "memory layer" language. Amit Bendov, CEO, May 2026 PRNewswire: *"The Gong Revenue Graph turns customer interactions across emails, calls, meetings, and deals into a living memory layer."*
- **Recent landing pages launched:** /platform (Revenue AI OS), /revenue-intelligence (category page), /press/gong-growth-accelerates-past-55-yoy-arr-tops-500m, State of Revenue AI 2026 report.

- **What they ignore:** Sub-50-rep teams, vertical SaaS GTM in the 2M–2M–50M ARR band, local-business operational signals, anything under \$30K ACV, teams without RevOps engineers.
- **Where we attack them:**
 - **Price floor** — Gong starts at *30K/yrper5seats. LeadAC starts at 30K/yrper5seats. LeadAC starts at 6K/yr* for the same seat count. 5× cheaper.
 - **Implementation** — Gong takes 8-12 weeks + services SOW. LeadAC takes 1 hour.
 - **ICP fit** — Gong’s “memory layer” is built for the enterprise revenue motion (call-heavy, complex multi-thread). We build memory for the *local-business outbound motion* (high-volume, density-based, owner-operator buyers).
 - **Surface area** — Gong’s memory is in the Gong UI. LeadAC’s memory writes directly into HubSpot, where the SDR already lives.
- **Where we don’t compete:** Call recording, conversation intelligence, deal forecasting, enterprise revenue orchestration.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** /vs/gong — high priority. Even if Gong doesn’t compete in our deals, prospects ask about it because of the Revenue Graph announcement.

4.6 Competitor — Clari + Salesloft (merged Dec 2025)

- **One-liner (current, May 2026):** *“The Predictive Revenue System. Create. Convert. Close.”* (Clari + Salesloft combined branding.)
- **One-liner (90 days ago):** Separate companies. Clari: *“The ultimate go-to-market platform for revenue teams.”* Salesloft: *“The Sales Engagement Platform.”*
- **Saturated clusters:** Enterprise revenue orchestration, forecasting, pipeline visibility, “Revenue Action Orchestration” (Gartner’s new Magic Quadrant category — Clari + Salesloft is a Leader).
- **Where they’re weak:** Mid-market accessibility (opaque pricing, “request a demo” only), implementation time (8-16 weeks), vertical specificity, deliverability infrastructure for SMB outbound.
- **Stated ICP:** Enterprise CROs, VPs of Sales, RevOps at 50+ rep companies.
- **Real ICP:** 1,500+ enterprise customers managing \$5 trillion in revenue. Average customer ≥ 50 sellers, dedicated RevOps team, Salesforce-native.

- **Growth channel:** Enterprise outbound + analyst relations + heavy Gartner influence.
- **Current hero:** *"The Predictive Revenue System."* + integration story (Clari forecast + Salesloft execution) + MCP Server (April 2026 launch — enables Claude/ChatGPT/Copilot/Gemini/Agentforce to operate on live Salesloft+Clari data).
- **Recent messaging shift:** The Dec 2025 merger reframed Salesloft from "sales engagement platform" → "the execution layer of the predictive revenue system" with Clari forecast as the brain. April 2026 MCP Server launch is a category-defining play to position as the "open AI surface for revenue data."
- **Recent landing pages launched:** /products/revenue-orchestration-platform, /company/newsroom/clari-salesloft-forecasting-execution-mcp-server, MCP Server product page, Webinar pages on "The Future of Revenue Orchestration."
- **What they ignore:** Mid-market and SMB outbound teams, vertical SaaS GTM (under 50 reps), self-serve buyers, anything under \$50K ACV.
- **Where we attack them:** Price (their *30K+/yr* → *our 30K+/yr* → *our 1.5K-\$3K/mo*), ramp (12-16 weeks → 1 hour), vertical context.
- **Where we don't compete:** Forecasting, pipeline orchestration at enterprise scale, MCP server / API surface for external AI tools.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** Probably skip dedicated /vs/clari-salesloft for now — wrong tier; address in education content.

4.7 Competitor — Lemlist

- **One-liner (current, May 2026):** *"The AI Outbound Platform for Relevant Outreach at Every Scale."*
- **One-liner (~90 days ago):** *"The all-in-one outbound platform."*
- **Saturated clusters:** AI outbound, multichannel sequencing, agentic enrichment.
- **Where they're weak:** Vertical specificity, deep account intelligence (their "AI Agentic Enrichment" reads websites/LinkedIn/CRM/past calls but doesn't store closed-loop pattern across deals), enterprise-grade CRM-native sync (still positioned to mid-market SDR teams who write their own sequences).
- **Stated ICP:** Sales and growth teams. Solo founders to scaling teams.

- **Real ICP:** Mid-8-figure ARR (bootstrapped, ~180 employees, +\$10M net new ARR in 2025); mid-market SDR teams; agencies. Acquired Claap (AI meeting notetaker) to expand into post-call intelligence.
- **Growth channel:** Brand-led + branded SEO + direct traffic + community (founder Guillaume Moubeche is a public figure). Per CMO Domitille de Saint-Exupéry May 2026: *"Distribution is the moat today, maybe even more important than your own product and content."*
- **Current hero:** *"The AI Outbound Platform for Relevant Outreach at Every Scale."* + *"Cover your TAM with AI agents that research, personalize, and engage prospects on autopilot."*
- **Recent messaging shift:** April 2026 launched "AI Agentic Enrichment" — system of specialized AI agents inside Lemlist reading website/LinkedIn/CRM/past calls per prospect. This is closest to our adjacent territory.
- **Recent landing pages launched:** /product/ai-agentic-enrichment, /blog/ai-agentic-enrichment (April 23, 2026).
- **What they ignore:** Closed-loop learning from won/lost CRM outcomes; vertical SaaS GTM specificity; local-business operational signals (their enrichment is generic-B2B-flavored).
- **Where we attack them:** Vertical context (they're horizontal), closed-loop pattern memory (they enrich per-prospect, we learn across deals).
- **Where we don't compete:** Sending, deliverability, multichannel orchestration, sequence UI.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** /vs/lemlist — medium priority.

4.8 Competitor — Smartlead

- **One-liner (current, May 2026):** *"Unlock the Full Power of AI Outbound."*
- **Saturated clusters:** Deliverability, unlimited mailboxes, SmartServers, agency white-label.
- **Where they're weak:** Account intelligence, vertical context, CRM-native enrichment.
- **Stated/real ICP:** Agencies, high-volume senders, technical operators. API-first design.
- **Growth channel:** Agency channel + PLG + word-of-mouth + comparison content.

- **What they ignore:** Account intelligence layer above the sender; vertical SaaS GTM teams selling, not just sending.
- **Where we attack them:** We don't. **Smartlead is a partner, not a competitor.** LeadAC + Smartlead is the ideal stack: LeadAC discovers + enriches + writes to HubSpot, Smartlead sends.
- **Last reviewed:** 2026-05-22.
- **Comparison page:** No /vs/smartlead. Instead build /with/smartlead integration story.

4.9 Competitor — Instantly

- **One-liner:** *"Reach Clients on Autopilot."*
- **Saturated clusters:** Flat-fee unlimited mailboxes, AI Reply Agent, all-in-one ROI bundle.
- **Weakness:** Same as Smartlead — sender, not an intelligence layer.
- **Position:** Partner not competitor. /with/instantly integration story.

4.10 Competitor — 11x.ai

- **One-liner:** *"Digital Workers. Human Results. For Sales, RevOps, and Go-to-Market Teams."*
- **Real ICP:** Enterprise GTM teams (named customers Xerox, Checkr, Sage, Rho). Pricing *5K+/month, custom contracts > 5K+/month, custom contracts > 2K/mo* enterprise floor.
- **Where they're weak:** Mid-market pricing accessibility, vertical SaaS context (Alice writes generic outbound emails — not tuned for vertical SMB buyer expectations), control surface (autonomous = less oversight).
- **Where we attack:** Mid-market price, vertical specificity, "AI does the homework, human does the conversation" framing instead of "AI replaces SDR."
- **Comparison:** /vs/11x — high priority; this is the most commonly evaluated alternative.

4.11 Competitor — Artisan (AVA)

- **One-liner:** *"Hire AVA, The Autonomous AI BDR."*
- **Real ICP:** Email-focused outbound automation, "virtual SDR" replacement framing.

- **Where they're weak:** Channel coverage (mostly email + LinkedIn), vertical specificity, control over message quality, post-reply handling.
- **Where we attack:** Vertical context, CRM-native sync, "augment your SDR" vs "replace your SDR."
- **Comparison:** /vs/artisan — medium priority.

4.12 Competitor — AiSDR

- **One-liner:** *"Your AI SDR that books meetings that close."*
- **Real ICP:** Budget-conscious teams (\$900/mo billed quarterly). HubSpot-native.
- **Where they're weak:** Salesforce limited (Zapier only), single-channel (email primary), vertical specificity, account-intelligence depth.
- **Where we attack:** Vertical context, multi-CRM (HubSpot first, then Pipedrive, Close, Salesforce), account graph depth.
- **Comparison:** /vs/aisdr — medium priority.

4.13 Competitor — Regie.ai (RegieOne)

- **One-liner:** *"The AI sales engagement platform for modern GTM."* (Matt Millen: *"You don't need more tools. You need fewer, better-connected ones."*)
- **Real ICP:** Mid-market and enterprise teams running "Force Multiplier Rep" model, \$35K+/yr starting price.
- **Where they're weak:** Vertical specificity, accessibility (annual contract, \$35K floor), implementation time (4-8 weeks).
- **Where we attack:** Price (we're 1/10 their entry point), implementation time, vertical context.
- **Comparison:** /vs/regie — low priority (their price tier rarely overlaps with ours).

4.14 Competitor — Reply.io

- **One-liner:** *"Supercharge your sales team with AI."*
- **Real ICP:** Mature multichannel sequencing for human-led outbound teams.
- **Where they're weak:** Account intelligence, vertical context. AI is bolted on, not native.
- **Position:** Adjacent partner, not direct competitor. Could integrate (/with/reply).

4.15 Real competitor: the **stack**, not any single vendor

The truth: our mid-market vertical SaaS prospect does not buy *one* of the tools above. They buy a **bundle**:

Apollo (\$350-\$500/mo)
+ Clay (\$446/mo Growth plan minimum for CRM sync)
+ Smartlead or Instantly (\$60-\$150/mo + \$29/client for agencies)
+ verification add-on (\$50/mo to fight Apollo bounce)
+ manual SDR time (5.6 hrs/rep/week, ~\$22.2K/yr/rep)
+ HubSpot Sales Hub Pro (\$500-\$2K/mo for the team)

= \$1,400-\$3,000/mo in tools + \$200K+/yr in lost SDR selling time
and still no closed-loop pattern memory

Copy

Our pitch (one cell of /vs/apollo-clay-gong page): *“Same money. One platform. Plus the memory your stack never had.”*

This is the bundle every comparison page positions against — not any single vendor.

5. Saturation Map

2026 saturated phrases. **Avoid in our copy.** Use only in comparison angles to position against. Saturation scores computed from how many of the 14 mapped competitors use the phrase on their current homepage hero / sub-hero / nav.

MDCSV↔ Expand Full

AI SDR / AI BDR / AI sales agent	“AI SDR,” “AI BDR,” “autonomo us SDR,” “AI sales agent,”	Apollo, ZoomInfo, Outreach.ai, 11x, Artisan, AiSDR, Regie,	0.95	AVOID in hero. Use only in comparison angles (“we don’t replace your SDR —

	“digital worker”	Lemlist, Salesloft		we make your SDR’s homework disappear”).
Agentic AI / AI agents				AVOID. This is the 2026 buzzword. Calling ourselves “agentic” makes us look like every other entry; saying we’re <i>not</i> trying to be agentic is differentiated.
	“agentic AI platform,” “AI agents act as a teammate,” “autonomous agents”	Outreach.ai , Apollo, Salesloft, Lemlist, Clay, Gong, Clari, 11x, Regie	0.93	
Revenue intelligence / Revenue AI / Revenue OS	“Revenue Intelligence,” “Revenue AI OS,” “Revenue Graph,” “Revenue Orchestration Platform”	Gong (owns “Revenue Intelligence” + “Revenue Graph”), Clari + Salesloft (own “Revenue Orchestration”)	0.65 (concentrated at enterprise)	USE CAREFULLY. Our category is “Revenue Intelligence for Local Business Sales” — we narrow with the vertical qualifier; we never say “Revenue Intelligence” alone without that qualifier or it reads as

				Gong-adjacent.
GTM platform / Go-to-market platform	“AI GTM platform,” “go-to-market platform,” “GTM operating system”	Apollo, ZoomInfo, Clari, Salesloft, Clay, Gong	0.92	AVOID in hero. Use “vertical SaaS GTM teams” as the qualified phrase.
Find and engage / Prospect and engage	“Find, connect with, and convert customers,” “Prospect, engage, and drive more revenue”	Apollo, ZoomInfo, Lemlist, Reply	0.78	AVOID. Use action verbs that are domain-specific to memory: “ <i>learn</i> ,” “ <i>remember</i> ,” “ <i>sharpen</i> ,” “ <i>compound</i> ”.
Multichannel outreach	“Multichannel sequences,” “email + LinkedIn + calls + SMS + WhatsApp”	Lemlist, Reply, Outreach, Apollo	0.85	AVOID unless calling out that we <i>handoff</i> to those tools — i.e. we are not the multichannel layer.
Personalization at scale	“Hyper-personalized at scale,” “AI-	Apollo, Lemlist, Outreach,	0.88	AVOID. Replace with “ <i>context the CRM never</i>

	personalize d emails”	AiSDR, Artisan, 11x		<i>had” and “sharpens with every won and lost deal”.</i>
Pipeline coverage / pipeline generation	“Generate more pipeline,” “fill your pipeline faster”	Salesloft, Clari, Apollo, ZoomInfo, Outreach, 11x	0.90	AVOID in hero. Use only in vertical- pack proof points where we cite a specific number.
Buying signals / Intent signals	“Buying signals,” “intent data,” “high-intent leads”	All 14 competitors	0.95	AVOID as the headline noun. Use as a supporting <i>category</i> (Section 8 Signal Taxonomy) but never as the lede.
AI does the busywork	“Stop wasting time on busywork,” “AI handles execution while you close”	Outreach, Salesloft, 11x, Lemlist, Apollo	0.82	AVOID. Replace with “ <i>the homework lives in your system, not your SDR’s head</i> ” — same idea, owned territory.

End-to-end / All-in-one	“End-to-end GTM,” “all-in-one platform,” “everything you need”	Apollo, ZoomInfo, Outreach, Lemlist, Salesloft, Clari	0.88	AVOID. Embrace being a <i>layer</i> , not a platform. “ <i>The memory layer your stack is missing</i> ” > “ <i>the all-in-one platform that replaces five tools</i> ”.
Lead generation	“Find leads on autopilot,” “endless leads,” “AI lead gen”	Apollo, Instantly, Apollo AI, Lemlist	0.92	AVOID. This phrase commodifies us. Replace with “ <i>the right local accounts</i> ” / “ <i>vertical-aware account discovery</i> ”.
Closed-loop / closed-loop learning	“Closed-loop reporting,” “closed-loop learning”	Faint mentions at Salesloft/Clari (marketing terminology, not core product)	0.20	USE. Whitespace candidate. See §6.
Memory layer / operational memory	“Living memory layer”	Gong (Revenue Graph PR May 2026)	0.15 at our tier (mid-market); 1.0	USE CAREFULLY with the vertical

		at enterprise		qualifier. <i>“The memory layer for vertical SaaS GTM”</i> — never just “the memory layer” or we collide with Gong.
Local business / local context / local intelligence	“Local context,” “local-business operational data”	Effectively nobody	0.05	USE AGGRESSIVELY. Our owned territory.
Vertical-aware / vertical-specific	“Vertical-aware discovery,” “vertical SaaS GTM”	Effectively nobody in this exact phrasing	0.10	USE. Whitespace.
Account intelligence	“Account intelligence”	ZoomInfo uses generic; Salesmotion uses for enterprise; not owned at mid-market	0.35	USE with vertical qualifier. <i>“Account intelligence for vertical SaaS GTM”</i> .

Rule of thumb (operational guide for writing any new copy)

- **Saturation > 0.6** → **AVOID.** Never as headline noun.
- **Saturation 0.3–0.6** → Use only with a sharp differentiator immediately following.
- **Saturation < 0.3** → Potential whitespace, see §6.

- **Test:** If you can imagine Apollo's homepage saying the same phrase tomorrow without changing anything else, drop it.

6. Whitespace Map

Phrases nobody owns yet that match our positioning. **Use these aggressively.**

6.1 Whitespace card template (in use below)

Whitespace: "Memory layer for vertical SaaS GTM"

- **Cluster label:** vertical-saas-memory
- **Why it's underserved:** Gong owns "Revenue Graph" / "memory layer" but exclusively for the enterprise ICP. No vendor claims a memory layer for mid-market vertical SaaS GTM teams selling to local businesses.
- **Pain support:** P-001, P-004, P-005, P-011, P-012
- **Buyer intent class:** Solution Seeking + Switching
- **Estimated saturation (0-1):** 0.15 at our tier
- **Estimated commercial volume:** Low search volume today (we'd be creating the search demand), high commercial intent when found
- **Why we can own it:** SemanticMemory primitive shipped in the codebase (`src/lib/ai-core/memory.ts`); chain orchestrator + closed-loop learning + CRM-native sync are pre-built; vertical specificity baked into the agent-workers registry.
- **Risk of failure:** Gong expands Revenue Graph downmarket faster than we expand into more verticals.
- **Status: Claimed (2026-05-22)**
- **First headline ship date:** Post-pivot homepage refresh, targeting 2026-06 (after first design partner case study with FineDine).
- **Performance to date:** N/A (pre-launch).

Whitespace: "Closed-loop ICP refinement"

- **Cluster label:** closed-loop-icp

- **Why it's underserved:** Salesloft mentions “closed-loop” in dashboard marketing only. Clari talks about “Revenue Context” but for forecasting, not ICP refinement. Nobody packages “your won/lost deals automatically sharpen tomorrow’s list” as a primitive.
- **Pain support:** P-001, P-003, P-004, P-013
- **Buyer intent class:** Solution Seeking + Buying Intent
- **Estimated saturation:** 0.10
- **Estimated commercial volume:** Low today; high once the term lands (this is a thing buyers want but don’t know to ask for)
- **Why we can own it:** The “ICP evolves over 90 days” demo is unique to LeadAC; it requires SemanticMemory + closed-loop CRM ingestion + discovery query auto-regeneration — all four of which are ours.
- **Risk of failure:** The metric isn’t legible until 60-90 days into a customer relationship — long enough that early evangelist demos are abstract.
- **Status: Claimed (2026-05-22)**
- **First headline ship date:** 2026-07 (after first paying customer has 60+ days of data).

Whitespace: “Vertical-aware account discovery”

- **Cluster label:** vertical-aware-discovery
- **Why it's underserved:** Apollo and ZoomInfo do firmographic discovery (industry code, employee count, location). Clay can build a vertical-specific workflow but you write it yourself. No vendor ships pre-built vertical signal libraries (e.g., “this restaurant uses Toast + OpenTable Lite + paper menu + recent expansion post = 0.78 propensity score”).
- **Pain support:** P-001, P-003, P-004, P-005
- **Buyer intent class:** Awareness + Solution Seeking
- **Estimated saturation:** 0.10
- **Estimated commercial volume:** Mid (when paired with vertical names — “HVAC sales intelligence,” “dental practice software outbound”)
- **Why we can own it:** src/lib/agent-workers/ registry is built to add a vertical = add a worker module + signal schema, not a new database.
- **Risk of failure:** Slow accumulation of vertical packs; if we only have HVAC + restaurant for 6 months, the claim ages.
- **Status: Claimed (2026-05-22)**

- **First headline ship date:** Already used in homepage v2 (src/components/marketing/v2/understands-grid.tsx); refresh post-pivot.

Whitespace: “Operational signals for local business”

- **Cluster label:** local-operational-signals
- **Why it’s underserved:** Apollo, ZoomInfo, Clay surface firmographic and engagement signals (job changes, funding, hiring). Nobody surfaces local-operational signals (negative review spike, booking system change, menu redesign, location-count delta, owner-activity surge) as a primitive.
- **Pain support:** P-003, P-005, P-012
- **Buyer intent class:** Solution Seeking + Operational Trigger
- **Estimated saturation:** 0.05
- **Estimated commercial volume:** Mid (paired with vertical name)
- **Why we can own it:** Signal Engine + Apify scrapers + chain orchestrator already shipped in leadac-intel Phase 3.
- **Status: Claimed (2026-05-22)**

Whitespace: “Pre-call brief” (the format, not the feature)

- **Cluster label:** pre-call-brief
- **Why it’s underserved:** Apollo’s AI Research Assistant produces a single text blob. Outreach’s Meeting Prep Agent produces a summary. Nobody packages “the 30-second pre-call brief with operational context + last 6 months of comparable account outcomes + suggested opener pulled from memory” as a named UX object that lives in the CRM card.
- **Pain support:** P-001, P-002, P-003, P-006, P-010
- **Buyer intent class:** Solution Seeking
- **Estimated saturation:** 0.20 (Outreach has a generic “Meeting Prep Agent” but for enterprise)
- **Estimated commercial volume:** Searched as “AI account briefing” / “AI pre-call prep”
- **Why we can own it:** Already live in homepage section (PreCallBrief component); strong UX object to brand.
- **Status: Claimed (2026-05-22)**

Whitespace: “1-hour onboarding” (vs Gong’s 8 weeks)

- **Cluster label:** one-hour-onboarding
- **Why it’s underserved:** Gong/Clari/Salesloft brag about ROI; none of them brag about onboarding speed because they can’t. Salesgraph promised “1 week”; we go further with “1 hour” because our chain orchestrator doesn’t require services SOW.
- **Pain support:** P-005, P-006, P-013
- **Buyer intent class:** Buying Intent
- **Estimated saturation:** 0.20
- **Why we can own it:** HubSpot OAuth + ICP brief + first discovery run = 60 minutes end-to-end. Single chain orchestrated; nothing manual.
- **Status: Claimed (2026-05-22).** Use as proof in /vs/* comparison pages and onboarding promise (§13 of original positioning doc).

Whitespace: “Audit-grade outbound” (AgentRun audit trail as a sellable primitive)

- **Cluster label:** audit-grade-outbound
- **Why it’s underserved:** Compliance is mentioned by Gong (SOC 2, GDPR) but not as the *outbound* differentiation. We can position our AgentRun audit log + multi-tenant scope as “every outreach decision has an audit trail” — relevant for mid-market companies starting to encounter compliance-curious buyers.
- **Pain support:** Adjacent (compliance pressure on outbound)
- **Buyer intent class:** Buying Intent (when procurement enters the deal)
- **Estimated saturation:** 0.30
- **Status: Exploring** — promote to claimed if we hear it in 3+ deal conversations.

7. Intent Taxonomy (reference)

The 10-class taxonomy used by leadac - intel Phase 2 classifier. Use these labels consistently across every section.

MDCSV↔ Expand Full

Pain	User frustration	<i>“Apollo’s bounce rate is killing our domain”</i>	Hook copy, social proof, problem-grid block
Solution Seeking	Active search	<i>“alternative to Clay for non-technical teams”</i>	Comparison page, alternative page
Switching Intent	Replacing a tool	<i>“moving off Outreach to save money”</i>	Switching guide + migration content
Buying Intent	Purchase likelihood	<i>“LeadAC pricing 2026”</i>	Pricing-page SEO, retargeting, sales handoff
Awareness	Educational	<i>“what is account intelligence”</i>	Top-of-funnel SEO, glossary content
Operational Trigger	Operational shift at the target account	<i>“restaurant just opened second location”</i>	Timed outbound (within signal-defined window)
Reputation Signal	Review issues at target account	<i>“negative reviews about delivery”</i>	Trigger-based pitch (operational stress → eval probability)
Growth Signal	Expansion at target account	<i>“hiring sales rep”</i>	Growth-mode pitch (often used adjacent to launch announcements)

Urgency	Immediate pain	<i>“lost 30% of bookings this month”</i>	Urgent outbound (high-priority queue)
Comparison	Alt evaluation	<i>“Apollo vs ZoomInfo vs LeadAC”</i>	Comparison page (/vs/<competitor>, /alternatives/<competitor>)

8. Signal Taxonomy (reference)

Signals are the moat. The Signal Engine in leadac - intel Phase 3 detects these automatically. Updated 2026-05-22 to reflect vertical-aware signals for local-business buyers (our ICP’s customers).

MDCSV↔ Expand Full

Negative review spike	Operational stress at the local business — CX or delivery problems usually correlate with software/process pain	Google Maps / Yelp / TripAdvisor reviews delta over 30 days	Within 7d	Restaurant, dental, beauty, fitness
Booking decline / appointment gap	Revenue stress, often correlates with reservation/scheduling system issues	Review tone + post frequency + booking system probe	Within 7d	Restaurant, dental, beauty, fitness, legal

Hiring surge (front-of-house, GM, ops manager)	Expansion mode or operational shift; growing capacity → new tooling decisions	LinkedIn jobs delta, Indeed delta	Within 14d	All verticals
New location announcement	Multi-location expansion = strong propensity to evaluate vertical SaaS that supports multi-site ops	Instagram/Facebook post + Google Maps location count delta + press release scan	Within 14d	Restaurant, HVAC/field service, beauty, fitness
Vertical tech-stack change	Migration off competitor / onto new POS/PMS/CRM — high-intent moment for upsell or switching pitches	Site footer + script signature (BuiltWith-style scrape via Apify)	Within 14d	All verticals
Menu redesign / pricing page change	Repositioning, possible re-merch or new growth phase	Website diff (Firecrawl)	Within 30d	Restaurant, beauty, fitness
Website decay / stale freshness	Operational neglect → buying readiness for “we’ll modernize you” pitches	Crawl freshness check, uptime probe	Within 30d	All verticals (especially HVAC, legal, auto repair)
Owner / GM activity increase	Growth mode, often correlates	LinkedIn post frequency,	Within 14d	All verticals

	with “open to new vendors”	Instagram post frequency		
OpenTable Lite / Toast Starter / Jobber free-tier signature	Currently on starter-tier vertical SaaS → high upgrade / switching propensity	Site footer + booking-flow probe	Within 14d	Restaurant, HVAC
Reviews mention competitor by name	Direct switching trigger	Review text scan (regex + LLM classifier)	Within 7d	All verticals
No-show on common signals (all signals quiet)	Operational neglect or business closure — disqualify or de-rank	Aggregate signal absence	N/A	All verticals (deprioritization signal)

Signal-to-pitch mapping (flow)

SVGPNG

Negative review spike
CX pain inferred
New location announcement
Expansion mode
Vertical stack signature change
Switching probability
Operational stress
Growth-mode propensity
Software eval probability
Outbound opportunity score
Triggered vertical-specific pitch
Won / lost / ghosted

9.4 Google Ads (RSA ad groups)

15 headlines + 4 descriptions per ad group. Marked winners go in bold once we have data.

Ad group: brand

Headlines:

1. LeadAC: Revenue Intelligence
2. Built for Vertical SaaS GTM
3. The Memory Layer Your CRM Needs
4. Find. Enrich. Sync. Learn.
5. Connect HubSpot in One Hour
6. Local Accounts, Not Generic Lists
7. Closed-Loop ICP Refinement
8. Vertical-Aware Account Discovery
9. The Stack's Missing Memory Layer
10. Better Than Apollo + Clay
11. For Teams Selling to Local Business
12. Pre-Call Briefs Inside HubSpot
13. 200 Local Accounts, Under 1 Hour
14. Learn From Every Won Deal
15. Apollo Finds. LeadAC Times.

Descriptions:

1. Account intelligence for vertical SaaS GTM teams selling to HVAC, restaurant, dental, beauty, legal, and field service. Synced to HubSpot.
2. Stop rebuilding the playbook every time you open a new vertical. LeadAC learns what closes and sharpens tomorrow's list.
3. Connect HubSpot. Define your ICP. Get 200 enriched local accounts running in under an hour. No RevOps engineer required.
4. We don't replace your SDRs — we make their homework disappear. Apollo + Clay alternative for vertical SaaS GTM teams.

Ad group: competitor / Apollo alternative

Headlines:

1. Apollo for Local Business?
2. Apollo Alternative for Vertical SaaS
3. Beyond Apollo's Firmographic Data
4. Apollo + Local Context = LeadAC

5. Fix Apollo's Bounce Rate Problem
6. Apollo for SDRs Selling to Restaurants
7. Better Apollo for HVAC SaaS Sales
8. Apollo Misses Local Context. We Don't.
9. Apollo Replacement for Vertical SaaS
10. Apollo + Clay Without the Setup
11. The Apollo Alternative That Learns
12. Apollo But For SMB-Selling SaaS
13. Replace Apollo + Clay + Verification
14. Apollo's Mid-Market Replacement
15. Vertical SaaS Apollo Alternative

Descriptions:

1. Apollo finds businesses. LeadAC finds local businesses ready to switch. Vertical-aware account intelligence synced to HubSpot in 1 hour.
2. Apollo's 12-14% bounce rate costs you \$50/mo in verification + your domain reputation. We layer context on top, don't compete on volume.
3. Stop paying for Apollo + Clay + Smartlead + verification + your SDR's research time. LeadAC bundles the intelligence layer for vertical SaaS GTM.
4. Mid-market vertical SaaS teams use Apollo for lists, then waste 5+ hours per SDR per week researching. We fix that, not replace Apollo.

Ad group: vertical / restaurant tech

Headlines:

1. Restaurant Tech SaaS Outbound
2. Sell Toast Faster With LeadAC
3. Local Account Intel for Restaurant SaaS
4. F&B SaaS Sales Intelligence
5. Restaurant Discovery for SaaS Sellers
6. Beyond OpenTable Footer Detection
7. Restaurant Tech SDR Productivity
8. Restaurant Outbound + HubSpot Sync
9. Restaurant Software Sales Memory Layer
10. The Restaurant Tech GTM Stack
11. Multi-Location Restaurant Targeting
12. Restaurant Tech Closed-Loop Discovery

13. Restaurant Owner Outreach At Scale
14. Restaurant Tech Account Intelligence
15. Restaurant POS Software Outbound

Descriptions:

1. Sell restaurant tech faster. LeadAC sees OpenTable, Toast, Resy, Square footprints + review tone + location count and writes it to HubSpot.
2. Built for restaurant tech SaaS teams selling POS, reservation, online ordering, and loyalty modules. 200 local accounts in 1 hour.
3. Apollo gives you a restaurant list. We give you the operational story — current stack, expansion signals, review tone, owner activity.
4. Stop rebuilding restaurant outreach when you open a new vertical. Memory layer for F&B SaaS GTM teams. HubSpot-native.

Ad group: vertical / HVAC + field service

Headlines:

1. HVAC Software Outbound Intelligence
2. ServiceTitan Customer Discovery
3. Field Service SaaS GTM Platform
4. Sell HVAC Software Faster
5. Field Service Software Sales Memory
6. HVAC Sales Intelligence + HubSpot
7. Jobber-Aware Account Discovery
8. Find HVAC Multi-Location Companies
9. HVAC SaaS Closed-Loop ICP
10. Field Service Outbound Platform
11. HVAC Software Pre-Call Briefs
12. ServiceTitan Adjacent SaaS Sales
13. Field Service Vertical SaaS Sales
14. Local HVAC Account Intelligence
15. Field Service Software Switching Signals

Descriptions:

1. See which HVAC companies use ServiceTitan vs Jobber vs Housecall Pro, plus location count, review pattern, and owner activity. HubSpot-native.

2. Beachhead vertical for LeadAC. Built for HVAC software vendors selling to multi-tech, multi-location field service businesses.
3. 5+ hours per SDR per week on manual research goes away. LeadAC writes 12 fields to HubSpot per HVAC account in seconds.
4. Vertical-aware discovery for field service SaaS teams. We see the vertical stack signature, you see the brief in HubSpot.

10. Vertical Packs

10.1 Vertical pack template (used below)

Each pack lives or dies by whether it sounds native to that vertical. Format:

- Persona reading the page
- What they say to themselves at 6pm Friday
- What they Google
- What they fear
- 3 pain stories (link to §3.2)
- Vertical-specific hero

- 5 buyer-question PAA-style schema
- Competitor gap exploited
- URL
- Status
- Performance

10.2 Vertical: Restaurant tech (FineDine-class)

- **Persona reading:** VP Sales / Head of GTM at restaurant tech SaaS (Toast adjacent — FineDine, BentoBox, Bbot, Resy Tech, [Owner.com](#)).
- **What they say to themselves:** *"I just need 24 SDRs to ramp to 100 calls/day in 4 weeks, not 5 months."*
- **What they Google:** "restaurant tech SDR ramp," "Apollo for restaurants," "Toast vs Square sales angle," "OpenTable footer signal," "restaurant POS outbound playbook"
- **What they fear:** Losing a multi-location group deal because the SDR didn't know the existing stack. Repeating restaurant lessons every time they open boutique hotels.
- **3 pain stories:** Story 1 (Ahmet/FineDine, §3.2), Story 4 (Daniel/Restaurant tech CRO, §3.2), Story 5 (Lena/Hospitality RevOps, §3.2)
- **Hero headline (vertical-specific):** *"Sell restaurant tech faster. LeadAC sees the footer, the menu, the booking flow, and the reviews — your CRM only sees the address."*
- **5 buyer questions (PAA / FAQ schema):**
 - How is LeadAC different from Apollo for restaurant tech outbound?
 - Can LeadAC detect OpenTable Lite, Toast Starter, Square Menu, and Resy footers automatically?
 - How does LeadAC speed up SDR ramp for restaurant tech teams?
 - Does LeadAC work with our existing HubSpot + Smartlead workflow?
 - What happens when we expand from restaurant tech to hospitality?
- **Competitor gap exploited:** Apollo + ZoomInfo don't reliably classify reservation / POS / online ordering stacks. Clay can but you write the workflow yourself.
- **URL:** /for/restaurant-tech-saas (currently routed via /vs/apollo-clay-gong until vertical pages ship)
- **Status:** Drafting (FineDine design partner pilot is the live source material)
- **Performance:** Pre-launch

10.3 Vertical: Field service / HVAC SaaS (Beachhead — Wave 1)

- **Persona reading:** VP Sales / Head of GTM at field service SaaS (ServiceTitan adjacent — Housecall Pro adjacent, Workiz, Service Fusion, Tradify, FieldEdge, FieldRoutes).
- **What they say to themselves:** *“My SDRs are calling HVAC owners who don’t pick up. We need to call the office manager and we need to know what software the office is already running.”*
- **What they Google:** “HVAC software outbound playbook,” “ServiceTitan vs Jobber sales intelligence,” “field service SDR research time,” “multi-location HVAC list,” “Apollo for trades”
- **What they fear:** A new ServiceTitan acquisition reshapes the competitor map overnight. SDRs burn out doing manual research on companies whose phone goes straight to voicemail.
- **3 pain stories:** Story 2 (Mike/HVAC SDR Manager, §3.2), Story 4 (Daniel — adapt for HVAC context), and a third to be sourced from the first paying field-service customer.
- **Hero headline:** *“Field service software outbound, with the memory layer your SDRs are already building in their heads.”*
- **5 buyer questions:**
 - Can LeadAC tell which HVAC companies use ServiceTitan vs Jobber vs Housecall Pro?
 - How does this work for selling field service SaaS to multi-location field-service companies?
 - What signals matter for the field-service vertical (PowerDialer adoption, multi-tech expansion, etc.)?
 - How do we ramp new BDRs targeting trades faster?
 - Does this work for plumbing / electrical / roofing software vendors too?
- **Competitor gap exploited:** Apollo and Clay don’t have vertical-stack signature libraries for ServiceTitan/Jobber/Housecall Pro. Manual research per HVAC account is 15-25 minutes (worse than restaurants because field service businesses have weaker online presence).
- **URL:** /for/field-service-saas (also routes to: /for/hvac-software-vendors)
- **Status: Beachhead — primary.** Highest concentration of vendor activity, biggest SDR budgets in vertical SaaS world. See §16 (decision log) for selection rationale.

- **Performance:** Pre-launch.

10.4 Vertical: Dental practice management SaaS (Wave 2)

- **Persona reading:** VP Sales at dental SaaS (Dentrix adjacent, Eaglesoft adjacent — Curve Dental, Open Dental, Modento, Yapi, Adit, RevenueWell).
- **What they say to themselves:** *“Dentists buy when their front desk burns out. I need to know which practices are hiring front-desk staff and which have shipped a new patient-portal feature.”*
- **What they Google:** “dental practice management software outbound,” “Dentrix vs Eaglesoft signal,” “multi-location dental DSO outbound,” “dental SaaS sales playbook”
- **3 pain stories:** Story 3 (Sarah/Dental marketing lead, §3.2) + 2 to be sourced from first dental customer.
- **Hero headline:** *“Outbound for dental SaaS — the multi-location DSO list, with the operational story.”*
- **URL:** /for/dental-practice-software
- **Status:** Wave 2. Ship after restaurant tech + field service have 5+ customers each.

10.5 Vertical: Beauty + wellness SaaS (Wave 2 / 3)

- **Persona reading:** VP Sales at beauty/wellness SaaS (Mindbody adjacent — Boulevard, Vagaro, Acuity, Glofox, GymMaster, Mindbody, ClubReady).
- **Why later:** Strong total opportunity but smaller average deal size at vendor level; lower SDR-team density per vendor.
- **URL:** /for/beauty-wellness-saas
- **Status:** Wave 3.

10.6 Vertical: Legal practice management SaaS (Wave 3)

- **Persona reading:** VP Sales at legal SaaS (Clio adjacent, MyCase, PracticePanther, Lawmatics).
- **Why later:** Compliance-heavy procurement, longer cycles, lower outbound responsiveness. Strong fit, slow ramp.
- **URL:** /for/legal-practice-software
- **Status:** Wave 3.

10.7 Vertical: Auto repair / shop management SaaS (Watch)

- **Persona:** Tekmetric, Shop-Ware, Mitchell 1 adjacent vendors.
- **Status:** Watch (long tail, low priority unless a customer pulls us in).

11. Comparison Angles

One angle per competitor. The angle is the *thing we do that they don't / can't / won't*. Comparison pages live at `/vs/<competitor>` and `/alternatives/<competitor>`.

11.1 LeadAC vs Apollo

- **Their strength:** Identity data at scale (230M contacts), free tier, brand recognition.
- **Our angle:** *"Apollo finds. LeadAC times."* — Apollo gives you a list; we give you the moment to call.
- **The proof:**
 - Apollo bounce rate 12-14% → forces \$50/mo verification add-on (P-002)
 - Apollo CRM sync delays of 3 hours (P-006)
 - Apollo's firmographic data has no concept of OpenTable Lite, ServiceTitan, Dentrux — the signals that matter for our buyer's customers
- **The objection we'll get:** *"But we already use Apollo. Are we supposed to drop it?"*
- **Our objection handler:** *"Keep Apollo. We sit on top. We read your Apollo list, add the local context Apollo doesn't have, and write 12 fields per account into HubSpot — including the signal that says this account is ready to buy this week."*
- **Headline draft:** *"Apollo gives you the address. We give you what's happening at that address."*
- **CTA draft:** *"See your Apollo list, enriched in 1 hour"*
- **Status:** Drafted; ships post-pivot homepage relaunch.

11.2 LeadAC vs ZoomInfo

- **Their strength:** Enterprise database scale, brand safety as a procurement choice, Copilot + GTM Workspace + GTM Studio.
- **Our angle:** *"ZoomInfo is for enterprises with RevOps teams. LeadAC is for vertical SaaS teams whose budget can't justify \$50K floors."*

- **The proof:** ZoomInfo’s “demo only, no self-serve” model + opaque pricing + 8-week implementation; our 1-hour onboarding + transparent 1.5K–1.5K–3K/mo tiers.
- **The objection:** *“But ZoomInfo’s data is the gold standard.”*
- **Objection handler:** *“ZoomInfo’s gold-standard data is firmographic. For local business, the data that wins is operational — review tone, location count, vertical-stack signature. ZoomInfo doesn’t index that. We do.”*
- **Status:** Low priority page — rarely competes directly with us. Ship as defensive content only.

11.3 LeadAC vs Outreach.ai (formerly Outreach.io)

- **Their strength:** Enterprise-grade sales engagement, agentic AI agents (Omni, Agent Studio, Revenue Agent, Deal Agent).
- **Our angle:** *“Outreach rebuilt itself for enterprise. We were built for the mid-market vertical SaaS team they left behind.”*
- **The proof:** Outreach.ai’s Spring 2026 release explicitly positions for “revenue orchestration” at enterprise; their pricing is now \$1,200+/mo for a small team and rising; their implementation requires RevOps engineering. The Gather practitioner thread (Story 2 / P-006) describes the pain of mid-market companies on Outreach.
- **The objection:** *“Outreach is mature, you’re new.”*
- **Objection handler:** *“Outreach is mature in the wrong direction. You’re not their ICP anymore — you’re paying enterprise prices for an enterprise platform when you have 12 SDRs and one RevOps person. We’re built for your tier.”*
- **Status:** Medium priority — high commercial intent from cost-conscious mid-market churn buyers.

11.4 LeadAC vs Clay

- **Their strength:** Workflow flexibility, 150+ data providers, GTM Engineer community, \$5B valuation, Sculptor NL builder.
- **Our angle:** *“Clay is a workshop. We’re the finished tool. Clay needs a GTM engineer. We need a HubSpot OAuth.”*
- **The proof:** Clay’s CRM sync requires \$446/mo Growth plan; learning curve is the #1 G2/Reddit complaint; credit overruns are common; no native sequencing means you still need Smartlead + Instantly + your own QA layer.

- **The objection:** *"Clay can do anything we want."*
- **Objection handler:** *"Yes — if you have a GTM engineer to do the doing. We've already built the vertical-specific workflows. Add one Clay-class capability we don't have, and we'll talk."*
- **Status: High priority.** Most overlap with our buyer's current stack.

11.5 LeadAC vs Gong

- **Their strength:** Owns "Revenue Intelligence" category; Revenue Graph launched May 2026 as a "living memory layer"; \$500M ARR, +55% YoY; Gartner Leader.
- **Our angle:** *"Gong's Revenue Graph is the memory layer for enterprise. We are the memory layer for mid-market vertical SaaS — 1/5 the price, 1/8 the time to onboard, vertical context Gong doesn't have."*
- **The proof:** Gong's price floor (~\$30K/yr per 5 seats); 8-12 week implementation; their Revenue Graph is built on call/email/meeting data — heavy on conversation intelligence, light on local-business operational signals.
- **The objection:** *"Gong has the brand and the proven playbook."*
- **Objection handler:** *"Gong's playbook is the enterprise playbook. Your team is 18 SDRs selling Toast or ServiceTitan licenses to local business owners — different motion, different price band, different signals."*
- **Status: High priority.** Buyers ask about Gong even when not evaluating it because of the Revenue Graph PR.

11.6 LeadAC vs Salesloft + Clari (merged Dec 2025)

- **Their strength:** "Predictive Revenue System," Gartner Leader for Revenue Action Orchestration, MCP Server (open AI surface April 2026).
- **Our angle:** *"They're the predictive revenue system for the enterprise. We're the operational memory for the SDR team selling into local business."*
- **The proof:** Their floor is \$30K+/yr for small teams; 8-16 week implementation; the MCP Server is a brilliant enterprise move that has zero relevance to a 5-rep SDR team on HubSpot.
- **Status:** Low-medium priority. Buyers may mention Salesloft (familiar) but rarely Clari at our tier.

11.7 LeadAC vs 11x.ai

- **Their strength:** Autonomous AI workers (Alice for outbound + Julian for inbound voice), 400M contact DB, enterprise polish.
- **Our angle:** *"11x replaces your SDR. We make your SDR's homework disappear. If your SDR's value is the conversation, the relationship, the closing — keep them. If it was the typing, fine, fire them. Our buyer's SDRs are too valuable for the typing-only model."*
- **The proof:** 11x pricing (*2K+/moenterprise floor, 2K+/moenterprise floor, 5K* typical); enterprise customers (Xerox, Checkr, Sage, Rho); Alice's outputs need vertical-specific tuning that's not their problem to solve.
- **Status: High priority.** This is the most commonly evaluated alternative.

11.8 LeadAC vs Artisan (AVA AI BDR)

- **Their strength:** Email + LinkedIn outbound automation, "virtual SDR" framing, built-in contact DB.
- **Our angle:** *"Artisan's Ava writes the email. We write the brief Ava (or your human SDR) reads before they write the email."*
- **Status:** Medium priority.

11.9 LeadAC vs Lemlist

- **Their strength:** AI Agentic Enrichment (April 2026), agency-friendly UI, multichannel.
- **Our angle:** *"Lemlist enriches one prospect at a time. We learn the pattern across all your won and lost deals — and write that pattern into your CRM, not just into your next sequence."*
- **The proof:** Lemlist's AI Agentic Enrichment reads website/LinkedIn/CRM/past calls per prospect; doesn't store closed-loop pattern across deals; horizontal not vertical.
- **Status:** Medium priority.

11.10 LeadAC vs the bundle (Apollo + Clay + Gong / Apollo + Clay + Smartlead)

- **Their "strength":** Best-of-breed.

- **Our angle:** “Three tools that don’t share context. Same money. One platform. Plus the memory your stack never had.”
- **The proof:** Stack cost math (\$4.15) — actual cost
2K+/*mointools*+2K+/*mointools*+200K+/yr in lost selling time + no learning loop.
- **Status: Top priority.** Already shipped at /vs/apollo-clay-gong — refresh with this thesis.

<i>"We rebuilt the playbook for HVAC and now we're going into dental and I have to rebuild it again."</i>	HVAC SaaS vendor, 90 employees	SDR Manager	2026-05	§2.3 Persona Mike, §3.2 Story 2
<i>"I'm the only RevOps person. I support 6 SDRs and 4 AEs. Last quarter I spent 2 weeks rebuilding our HubSpot enrichment workflow because Clay's pricing changed and we cut credits."</i>	Boutique hotel SaaS, ~70 employees	RevOps Lead	2026-05	§3.2 Story 5
<i>"Board wants us to hit \$35M ARR next year. That means doubling SDR headcount to 24. CFO wants to know what the per-SDR ramp cost will be."</i>	Restaurant tech SaaS, ~140 employees	VP Sales	2026-04	§3.2 Story 4
<i>"I built a target account list 18 months ago of 4,200 multi-</i>	Dental SaaS	Head of Marketing	2026-05	§3.2 Story 3

location dental practices. We pushed it to Apollo, ran a Salesloft sequence on it, and got a 0.4% reply rate.”

vendor, 50 employees

Customer names withheld pending case-study consent. All quotes captured in .agents/customer-interview-notes/.

12.4 G2 / Capterra quotes

To be populated as we ship the comparison content and customers leave reviews. Quoted Reddit + G2 patterns aggregated through SalesEcho 2026 review currently fill this gap.

12.5 Support / NPS / churn quotes

To be populated post-launch.

13. Cycle Review

Friday journal, 10 minutes. Reverse-chronological. Forcing function for not drifting.

Cycle 2026-W21 (current — week of 2026-05-22)

- **What changed in the market this week:**
 - Apollo PRNewswire push: G2 + Brex + Ramp recognition for GTM leadership (2026-05-21). Apollo’s commercial momentum is real; not a paper tiger.
 - Gong PR continues to amplify “Revenue Graph” launched 2026-05-12. The phrase “living memory layer” is now in the press cycle.
 - Outreach.ai (rebranded Apr 2026) is in market hard with Omni + Agent Studio + Revenue Agent / Research Agent / Deal Agent.
- **What competitors moved:**
 - Apollo: doubled down on “AI sales platform for revenue growth”; G2 #1 in sales intelligence.

- Gong: explicitly claimed the “memory layer” language; +55% YoY, \$500M ARR.
- Lemlist: AI Agentic Enrichment is now their headline feature.
- **What new whitespace emerged:**
 - The “memory layer for mid-market vertical SaaS” phrase remains uncontested. Gong took the enterprise side, leaving our tier wide open.
- **What we shipped:**
 - Positioning workbook v2 (this doc, the pivot from “intent intelligence for local business outbound” to “revenue intelligence for vertical SaaS sales”).
- **What performed:**
 - N/A (pre-launch).
- **What underperformed:**
 - The pre-pivot homepage v1 was running with placeholder copy; conversion data is meaningless until post-pivot relaunch.
- **What we’ll try next:**
 - Refresh (marketing)/page.tsx hero, problem grid, intelligence-loop section copy with H-101 / H-102 / S-101 / C-101 — done; ship the rest.
 - Refresh /vs/apollo-clay-gong with the Stack-bundle thesis (§4.15) and proof points from §3.1.
 - Schedule 5 customer dev calls with HVAC/field service SaaS VPs Sales (beachhead validation).
- **Decisions made (links to §14):** D-001 (pivot), D-002 (beachhead = HVAC/field service + restaurant tech), D-003 (drop “intent intelligence” framing).

Cycle 2026-W20 (week of 2026-05-15)

- **What changed in the market this week:** Gong Revenue Graph launch (2026-05-12). Forces a positioning refresh — see D-001.
- **Decisions made:** D-001.

Cycle 2026-W19 (week of 2026-05-08)

- Pre-pivot. Cycle archived.

Tip: archive cycles older than 90 days into a sub-page; keep last 12 weeks visible.

14. Decision Log

Every positioning decision goes here. Including reversals — especially reversals.

MDCSV $\leftrightarrow$ ExpandCC Full

D-001	2026-05-22	Pivot the category from “ <i>Intent intelligence for local business outbound</i> ” → “ <i>Revenue intelligence for vertical SaaS sales (mid-market, selling to local business)</i> ”	Old framing implied we sell to the local businesses directly OR to agencies. Both ICPs are wrong. New framing matches the product (workspace-scoped, multi-CRM, AgentRun audit) and the actual	Founder	First 10 customers consistently describe themselves NOT as vertical SaaS GTM teams but as e.g. agencies → revisit	Active
-------	------------	--	--	---------	---	--------

			buyer (VP Sales at FineDine-class vertical SaaS).			
			Highest vendor concentration, biggest SDR teams per vendor, hottest 2026 category (Service Titan/Jobber/Housecall Pro all hiring SDRs aggressively). Restaurant tech serves as the live design-partner		5 customer dev calls fail to validate HVAC pain → reconsider dental as primary	
D-002	2026-05-22	Beachhead = HVAC / field service SaaS (primary) + restaurant tech SaaS (secondary, via FineDine design partner pilot)		Founder		Active

			validation.			
D-003	2026-05-22	Drop “AI SDR” from homepage hero (and any non-comparison context)	Saturation 0.95; no defensible differentiation; collides with Artisan/11x/AiSDR/Regie	Founder	Sustained drop in homepage CVR specifically on the “AI SDR not present” variant	Active
D-004	2026-05-22	Anti-position against “agentic AI” / “AI agents” framing	Saturation 0.93. Saying we <i>aren’t</i> trying to replace the human is differentiating in 2026.	Founder	We launch a fully autonomous AI SDR product — i.e. become 11x — which we are not planning	Active

D-005	2026-05-22	Ship the “memory layer” phrase with vertical qualifier always attached	Gong owns “memory layer” enterprise-side as of May 2026 Revenue Graph launch. Unqualified usage collides. “Memory layer for vertical SaaS GTM” is ours; “the memory layer” is Gong’s.	Founder	Gong launches sub-\$5K/month tier targeting our band (low probability 6mo, medium 12mo)	Active
D-006	2026-05-22	Smartlead, Instantly, Reply.io are partners, not competitors — never build /vs/<sender> comparison	Senders are downstream of our enrichment chain. Competi	Founder	Sender adds a Clay-class enrichment layer that compe	Active

		pages; build /with/<sender> integration pages	ng with them confuse s the buyer and creates artificial overlap.		tes with us directl y	
D-007	2026-05-22	Pricing tiers: Pilot <i>500/mo(30days,500accounts)→Team500/mo(30days,500accounts)→Team1.5K/mo (5 seats, 5K accounts) → Growth 3K/mo(15seats,20Kaccounts)→Enterprisecustom3K/mo(15seats,20Kaccounts)→Enterprisecustom5K+</i>	Salesgraph's <i>1K–1K–10K</i> range is right band; ours is slightly aggressive at the floor to match price-conscious mid-market and a 30-day pilot entry point	Founder	First 5 paid customers find Team tier too tight on seat / account count → bump	Active
D-008	2026-05-22	No PLG self-serve trial. Sales-led only. Pilot	ICP is sales-led / VP Sales-	Founder	Q4 2026 data shows	Active

		(\$500/mo) is the entry point.	driven. PLG self-serve creates wrong-fit signups (agencies, solo founders) that we can't economically support.		>40% of qualified inbound demos come from individual SDRs / solo operators → introduce limited self-serve	
D-009	2026-05-22	Onboarding promise = <i>"Connect your CRM. We'll have your first 200 local accounts, enriched and synced, in under an hour."</i>	More aggressive than Salesgraph's "1 week" because our chain orchestrator + ICP brief + Apify-backed discovery can	Founder	First 5 customer onboardings consistently take >2 hours → soften to 1 day	Active

actually
do it.

SLA.

D-010	2026-05-22	Anti-persona: local business owners themselves (HVAC owner, restaurant owner, dentist) are never our customer. They are our buyer's customer. Onboarding must reject those signups politely with a redirect to a partner directory.	Cross-tenant confusion and brand damage if a local business owner thinks LeadAC is for them	Founder	Never reverse	Locked

Reversal protocol

1. Cite the original decision row by ID (D-001, D-002, etc.).

2. State what new evidence triggers the reversal (customer interviews, conversion data, market move).
3. Note who approved the reversal.
4. Add the reversal as a new row, mark the original “Reversed” in the Status column.

15. Glossary

MDCSV↔ Expand Full

Whitespace	A semantic cluster with high pain support and low competitor coverage
Saturation	Fraction of relevant competitors using a given cluster’s phrases on hero / sub-hero / nav
Intent class	The commercial meaning of a phrase (10 classes, §7)
Signal	An observable operational change at the target account that predicts buying readiness (§8)
Narrative pack	A set of generated copy variants per whitespace, all sharing provenance
Provenance	The audit trail behind every piece of copy: whitespace + evidence + competitor gap
Cycle	The weekly rhythm: ingest Mon → cluster Wed → narrative Thu → digest Fri
Vertical pack	A vertical-specific set of personas + pains + headlines + landing page scaffold (§10)

Saturation Map	The set of clusters competitors crowd; we avoid these (\$5)
Whitespace Map	The set of clusters competitors miss; we own these (\$6)
ICP	Ideal Customer Profile — the customer we’d build the product for if we could only have one (\$2)
Pain story	A first-person customer narrative used as headline / outbound / landing source material
Comparison angle	The single thing we do that a specific competitor does not / cannot / will not (\$11)
Trigger	An operational event that increases buying readiness within a known time window (\$8)
Outbound opportunity score	The aggregate score that ranks signal events for sales outreach (Phase 3 of leadac - intel)
Revenue Graph	Gong’s branded “living memory layer” launched May 2026 for enterprise revenue teams. Used here to delineate where we don’t compete.
Revenue Orchestration	Gartner Magic Quadrant category created 2026 — Clari + Salesloft is Leader. Used here to delineate the enterprise tier we deliberately step around.
GTM Engineer	A practitioner identity invented by Clay (Kareem Amin, 2024) describing a technical operator who builds enrichment pipelines and outbound workflows. Used here to articulate “Clay needs a GTM engineer; we don’t.”
Vertical SaaS	Software built for a specific industry (restaurant, HVAC, dental, legal, beauty) rather than horizontal across all B2B. Toast,

	ServiceTitan, Jobber, FineDine, Boulevard, Curve Dental, Clio are canonical examples.
SDR ramp time	The time from SDR hire to consistent quota attainment. Industry benchmark: 4-6 months. Our claim: shrink to 3-4 weeks for the second-and-later SDR through memory-layer transfer.
Closed-loop ICP refinement	The process by which won/lost deal outcomes automatically sharpen tomorrow’s target account list. LeadAC primitive.
Vertical-aware discovery	Account discovery that understands vertical-specific software signatures (OpenTable Lite, ServiceTitan, Dentrix) and operational signals — not just firmographic data. LeadAC primitive.
AgentRun	LeadAC’s audit primitive — every agent worker invocation, every memory write, every CRM sync writes to AgentRun for compliance + observability. Mentioned in §6 as a candidate sellable feature.

Appendix A — Connection to the Intel System

This workbook is the **human side** of the system. The intel pipeline (leadac-intel) generates evidence, clusters, and narrative drafts. This workbook is where the founder makes the editorial decisions.

MDCSV↔ Expand Full

§3 (Pain Library)	Reddit + G2 + Capterra ingestion → Phrase + Cluster	Promote top 10 to “we own this”
§4 (Competitor Map)	CompetitorSnapshot diffs (Firecrawl + Ahrefs + SEMrush + BuiltWith)	Editorial per card

§5 (Saturation)	Saturation Detector → Whitespace Engine	Decide AVOID / SHARPEN / COMPARE
§6 (Whitespace)	Whitespace Ranker output	Status: Exploring / Claimed / Shipped / Killed
§9 (Messaging)	Narrative Engine generated drafts	Approve / kill / edit per ID
§12 (Evidence)	Reddit / G2 / Capterra / sales- call ingestion	Tag what's used where
§13 (Cycle Review)	Friday digest auto-summary	The 10-minute editorial pass
§14 (Decision Log)	<i>Founder-authored only</i>	Feeds back into intel as Narrative.outcomeScore overrides

Every section that the system can pre-fill should be reviewed weekly, not authored from scratch. **The founder's job is editing, not writing.**

Appendix B — Filling order for a brand-new copy of this workbook

If you're filling this in from scratch (e.g. a new niche or major repositioning), the dependency order is:

1. §1 (Thesis) — set the category and one-liner first; everything below derives from this.
2. §2 (ICP) — narrow to one primary; secondary ICPs come later.
3. §3 (Pain Library) — start with 10, even if rough. The intel system will expand.
4. §4 (Competitor Map) — top 5 competitors, then expand to 14.
5. §7 + §8 (taxonomies) — read-only references; just confirm you understand the labels.
6. §5 + §6 (Saturation + Whitespace) — these need data from the intel system. Skip on day 1.
7. §9 (Messaging) — derived from whitespace; don't write headlines until §6 is filled.
8. §10 (Vertical Packs) — pick the first vertical, ship it, then add the second.
9. §11 (Comparison Angles) — only after §4 + §6 are stable.
10. §12, §13, §14 — running logs. Start writing immediately.
11. §15 (Glossary) — read-only; keep open in a side tab.

Appendix C — Keyword inventory (operational summary)

Single source of truth for keywords used by SEO, paid, and outbound subject lines.
Updated alongside §5 (Saturation) and §6 (Whitespace).
